

Marks: 58

Question No: 1 ( Marks: 1 ) - Please choose one

\*.doc is \_\_\_\_\_ by type.

.

- ▶ Sequential File
- ▶ **Random Access File**
- ▶ Data File
- ▶ Record File

Question No: 2 ( Marks: 1 ) - Please choose one

Which of the following is NOT a preprocessor directive?

- ▶ #error
- ▶ #define
- ▶ #line
- ▶ **#undef**

Question No: 3 ( Marks: 1 ) - Please choose one

The return type of operator function must always be void.

- ▶ True
- ▶ **False**

The syntax of the prototype of the overloaded operator function is: *return-type operator operator-symbol (parameter-list);*

Question No: 4 ( Marks: 1 ) - Please choose one

What does (**\*this**) represents?

- ▶ The current function of the class
- ▶ The current pointer of the class
- ▶ **The current object of the class**
- ▶ A value of the data member

Whenever an object calls a member function, the function implicitly gets a pointer from the calling object. That pointer is known as *this* pointer. '*this*' is a key word. We cannot use it as a variable name. '*this*' pointer is present in the function, referring to the calling object. For example, if we have to refer a member, let's say *buf*, of our *Stringclass*, we can write it simply as: *buf* ;

Question No: 5 ( Marks: 1 ) - Please choose one

The statement `cin.get ();` is used to,

- ▶ Read a string from keyboard
- ▶ **Read a character from keyboard**
- ▶ Read a string from file
- ▶ Read a character from file

Question No: 6 ( Marks: 1 ) - Please choose one

When we do dynamic memory allocation in the constructor of a class, then it is necessary to provide a destructor.

- ▶ True
- ▶ False

Question No: 7 ( Marks: 1 ) - Please choose one

Overloaded new operator function takes parameter of type *size\_t* and returns

- ▶ void (nothing)
- ▶ void pointer
- ▶ object pointer
- ▶ int pointer

Question No: 8 ( Marks: 1 ) - Please choose one

The second parameter of operator functions for <<>> are objects of the class for which we are overloading these operators.

- ▶ True
- ▶ False

The second parameter to *operator <<* is an object of the class that we are overloading the operator for. Similar is the case for *operator >>*.

Question No: 9 ( Marks: 1 ) - Please choose one

C++ is a case-sensitive language

- ▶ True
- ▶ False

Question No: 10 ( Marks: 1 ) - Please choose one

To include code from the library in the program, such as *iostream*, a directive would be called up using this command.

- ▶ #include "iostream.h"
- ▶ include
- ▶ include
- ▶ #include

<http://www.vustudents.net>

Question No: 11 ( Marks: 1 ) - Please choose one

A template function must have only generic data types.

- ▶ True
- ▶ False

Its not compulsory, only min we have one generic data type but we can have native data type as well.

Question No: 12 ( Marks: 1 ) - Please choose one

Template class can not have static variables.

- ▶ True
- ▶ False

Question No: 13 ( Marks: 1 ) - Please choose one

What will be the correct syntax to assign an array named *arr* of 5 elements to a pointer *ptr*?

- ▶ \*ptr = arr ;
- ▶ ptr = arr ;

<http://www.vustudents.net>

- ▶ \*ptr = arr[5] ;
- ▶ ptr = arr[5] ;

Question No: 14 ( Marks: 1 ) - Please choose one

What will be the correct syntax to access the value of fourth element of an array using pointer ptr?

- ▶ ptr[3]
- ▶ (ptr+3)
- ▶ \*(ptr+3)
- ▶ Both 1 and 3

try this demo program to confirm result I wrote for you.

2 option will print the reference rest 1,3 are right options

```
#include
#include
// #include
main()
{
int myarr [4]= {0,1,2,3};
int *ptr ;
ptr = myarr;
cout<
cout<<*(ptr+3);
cout<<(ptr+3);
int i = 0;
cin>> i;
}
```

Question No: 15 ( Marks: 1 ) - Please choose one

If most significant bit of un-signed number is 1 then it represents a positive number.

- ▶ True
- ▶ False

The most significant bit is used as a sign bit. If this bit is zero, the number is considered positive. However, if it is 1, the number will be considered negative.

Question No: 16 ( Marks: 1 ) - Please choose one

If there is a symbol (& sign) used with the variable name followed by data type then it refers to \_\_\_\_\_ and if & is being used with variable name then it refers to \_\_\_\_\_.

- ▶ Address of variable, reference variable
- ▶ Reference variable, value of variable
- ▶ Reference variable, address of variable
- ▶ Address of variable, value of variable

we see a data type followed by & sign, it's a reference. And when the & sign is being used in the code with a variable name then it is the address of the variable

**Question No: 17 ( Marks: 1 ) - Please choose one**

We can also do conditional compilation with preprocessor directives.

- ▶ True
- ▶ False

**Question No: 18 ( Marks: 1 ) - Please choose one**

The default value of a parameter can be provided inside the \_\_\_\_\_

- ▶ function prototype
- ▶ function definition
- ▶ both function prototype or function definition
- ▶ none of the given options.

The default value of a parameter is provided inside the function prototype or function definition.

**Question No: 19 ( Marks: 1 ) - Please choose one**

Classes defined inside other classes are called \_\_\_\_\_ classes

- ▶ looped
- ▶ nested
- ▶ overloaded
- ▶ none of the given options.

**Question No: 20 ( Marks: 1 ) - Please choose one**

What purpose do classes serve?

- ▶ Data encapsulation
- ▶ Providing a convenient way of modeling real-world objects
- ▶ Simplifying code reuse
- ▶ All of the given options

**Question No: 21 ( Marks: 1 ) - Please choose one**

Every class contains \_\_\_\_\_.

- ▶ Constructor
- ▶ Destructor
- ▶ Both a constructor and a destructor
- ▶ None of the given options

**Question No: 22 ( Marks: 1 ) - Please choose one**

new operator is used to allocate memory from the free store during

- ▶ Compile Time
- ▶ Run Time
- ▶ Link Time
- ▶ None of the given options

**Question No: 23 ( Marks: 1 ) - Please choose one**

When an object of a class is defined inside another class then,

- ▶ Destructor of enclosing class will be called first

- ▶ Destructor of inner object will be called first
- ▶ Constructor and Destructor will be called simultaneously
- ▶ None of the given options

**Question No: 24 ( Marks: 1 ) - Please choose one**

It is possible to define a class within another class.

- ▶ True
- ▶ False

**Question No: 25 ( Marks: 1 ) - Please choose one**

New and Delete are also used with \_\_\_\_\_ and data types as well.

- ▶ Class, Objects
- ▶ Structures, Pointers
- ▶ Both Class and structures
- ▶ None of above

**we prefer to use new and delete operators as they are designed to work with classes and objects**

**Question No: 26 ( Marks: 1 ) - Please choose one**

With New keyword, data types and class members are initialized with meaningful values instead of garbage.

- ▶ True
- ▶ False

**Question No: 27 ( Marks: 2 )**

How many arguments a Unary Operator take? Can we make a binary operator as unary operator?

**Ans: Unary operator takes only one argument like i++ or i-- (Post increment or post decrement operators for intergers) or ++i,--i (Pre increment or pre decrement operators for intergers) ,we can not make Unary operator as binary or binary as Unary operator.**

**Question No: 28 ( Marks: 2 )**

Which arithmetic operators cannot have a floating point operand?

**Ans:**

**Modulus operator**

**This operator can only be used with integer operands ONLY**

**Question No: 29 ( Marks: 2 )**

What are manipulators? Give one example.

**Ans:**

**The manipulators are like something that can be inserted into stream, effecting a change in the behavior. For example, if we have a floating point number, say pi ( $\pi$ ), and have written it as `float pi = 3.1415926` ; Now there is need of printing the value of pi up to two decimal places i.e. 3.14 . This is a formatting functionality. For this, we have a *manipulator* that tells about width and number of decimal points of a number being printed.**

**Some manipulators are parameter less. We simply use the name of the manipulator that works. For example, we have been using `endl`, which is actually a manipulator, not data. When we write `cout << class="Apple-converted-space">` ; a new line is output besides flushing the buffer. Actually, it manipulates the output stream.**

**Question No: 30 ( Marks: 2 )**

Write down piece of code that will declare a matrix of 3x3. And initialize all its locations with 0;

Ans:

```
int matrix [3] [3] ;  
matrix [0] [0] = 0;  
matrix [0] [1] = 0;  
matrix [0] [2] = 0;  
matrix [1] [0] = 0;  
matrix [1] [2] = 0;  
matrix [1] [2] = 0;  
matrix [2] [0] = 0;  
matrix [2] [1] = 0;  
matrix [2] [2] = 0;
```

we can also do it as given below

```
int matrix [3][3] = { 0 }; //all elements 0
```

**Question No: 31 ( Marks: 3 )**

Which one (copy constructor or assignment operator) will be called in each of the following code segment?

- 1) Matrix m1 (m2);
- 2) Matrix m1, m2;  
m1 = m2;
- 3) Matrix m1 = m2;

Ans:

- 1) Matrix m1 (m2); **copy constructor**
- 2) Matrix m1, m2;  
m1 = m2; **assignment operator**
- 3) Matrix m1 = m2; **assignment operator**

**Question No: 32 ( Marks: 3 )**

What will be the output of following function if we call this function by passing int 5?

```
template T reciprocal(T x) {return (1/x); }
```

Ans:

**1/5**

**Question No: 33 ( Marks: 3 )**

Identify the errors in the following member operator function and also correct them.

```
math * operator(math m);  
math * operator (math m)  
{  
math temp;  
temp.number= number * number;  
return number;  
}
```

ANS:

The errors are in the arguments of the member operation function and also in the body of operator member function.

Correct function should be

```
math *operator(math *m);  
math *operator (math *m)  
{
```

```
math temp;
temp = m;
temp.number= number * number;
return temp.number;
}
```

**Question No: 34 ( Marks: 5 )**

Write a program which defines three variables of type double which store three different values including decimal points, using setprecision manipulators to print all these values with different number of digits after the decimal number.

Ans:

```
#include
#include
int main ()
{
double x1 = 12345624.72345
double x2 = 987654.12345
double x3 = 1985.23456
cout <<>
cout <<>
cout <<>
return 0;
}
```

**Question No: 35 ( Marks: 5 )**

What are the advantages and disadvantages of using templates?

Ans:

Many things can be possible without using templates but it does offer several clear advantages not offered by any other techniques:

**Advantages:**

- Templates are easier to write than writing several versions of your similar code for different types. You create only one generic version of your class or function instead of manually creating specializations.
- Templates are type-safe. This is because the types that templates act upon are known at compile time, so the compiler can perform type checking before errors occur.
- Templates can be easier to understand, since they can provide a straightforward way of abstracting type information.
- It helps in utilizing compiler optimizations to the extreme. Then of course there is room for misuse of the templates. On one hand they provide an excellent mechanism to create specific type-safe classes from a generic definition with little overhead.

**Disadvantages:**

On the other hand, if misused

- Templates can make code difficult to read and follow depending upon coding style.
- They can present seriously confusing syntactical problems esp. when the code is large and spread over several header and source files.
- Then, there are times, when templates can "excellently" produce nearly meaningless compiler errors thus requiring extra care to enforce syntactical and other design constraints. A common mistake is the angle bracket problem.

**Question No: 36 ( Marks: 5 )**

Suppose a program has a math class having only one data member **number**.

Write the declaration and definition of operator function to overload + operator for the statements of main function.

```
math obj1, obj2;
```

```
obj2= 10 + obj1 ;
```

Ans:

```
#include
```

```
math
```

```
{
```

```
  mth operator + (obj1,obj2)
```

```
  mth operator + (obj1,obj2)
```

```
{
```

```
  mth operator + (obj1,obj2)
```

```
  mth operator + (obj1,obj2)
```

```
}
```

```
}
```

## FINALTERM EXAMINATION

Fall 2009

CS201- Introduction to Programming

Time: 120 min

Marks: 75

If we write a statement like **s2 = s1;** \_\_\_ will be the calling object and \_\_\_\_ will be passed to the = operator as an argument.

▶ s1, s1

▶ s1, s2

▶ s2, s1

▶ s2, s2

What will be the output of following statement?

```
cout << setfill('0') << setw(7) << 128 ;
```

▶ 0000128

▶ 0128128

▶ 1280000

▶ 0012800

The stream insertion and extraction operators are not already overloaded for \_\_\_\_\_

▶ Built-in data types

▶ User-defined data types

▶ Both built-in and user-defined types

▶ None of the given options

Constructors can not be overloaded like ordinary functions.

▶ True

- ▶ False

Overloaded new operator function takes parameter of type *size\_t* and returns

- ▶ void (nothing)
- ▶ void pointer
- ▶ object pointer
- ▶ int pointer

Which of the following is the correct way to declare a variable x of integer type?

- ▶ x int ;
- ▶ integer x ;
- ▶ int x;
- ▶ x integer

Reserve words cannot be used as a variable name.

- ▶ True
- ▶ False

A template function must have at least ----- generic data type

- ▶ Zero

- ▶ One
- ▶ Two
- ▶ Three

Template functions can also be overloaded

- ▶ True
- ▶ False

We can not make a member function of a class as template function.

- ▶ True
- ▶ False

When break statement is encountered in switch statement, it

- ▶ Stops the entire program
- ▶ Stops the execution of current statement
- ▶ Exits from switch statement
- ▶ None of the given options

We can also define a variable of user define data type (object) as static.

▶ True

▶ False

The declarator of Plus (+) member operator function is

▶ Class-Name operator + (Class-Name rhs)

▶ operator Class-Name + ( )

▶ operator Class-Name + ( rhs)

s ▶ Class-Name operator + ( )

Let suppose

```
int a, b, c, d, e;
```

```
a = b = c = d = e = 42;
```

This can be interpreted by the complier as:

▶ `a = (b = (c = (d = (e = 42))));`

▶ `(a = b = (c = (d = (e = 42))));`

▶ `a = b = (c = (d = (e = 42)));`

▶ `(a = b) = (c = d) = (e = 42);`

What will be the range of numbers generated by function `rand () % 9`?

▶ 0 to 9

▶ 1 to 9

▶ 0 to 8

▶ 1 to 8

Which of the following is the correct function call having array named *student* of 10 elements as a parameter.

- ▶ addRecord(student[]) ;
- ▶ addRecord(student) ;
- ▶ addRecord(student[10]) ;
- ▶ addRecord(\*student) ;

Declaring structures does not mean that memory is allocated.

- ▶ True
- ▶ False

Identifier is a name that can be given to variables, labels and functions.

- ▶ True
- ▶ False

If a class A declares itself a friend of class B and a class B declares itself a friend of class C then

- ▶ Class A is also a friend of class C.
- ▶ Class B is also a friend of class A.
- ▶ Class A is also a friend of class C if A declares C as its friend.
- ▶ Class A is also a friend of class C if C declares A as its friend.

Which of the following statement is best regarding declaration of friend function?

- ▶ Friend function must be declared after public keyword.
- ▶ Friend function must be declared after private keyword.
- ▶ Friend function must be declared at the top within class definition.
- ▶ It can be declared anywhere in class as these are not affected by the public and

private keywords.

A pointer is a special type of variable that contain \_\_\_\_\_

- ▶ Memory Address
- ▶ Data values
- ▶ Both Values and Memory
- ▶ None of given of options

When memory for a program is allocated at run time then it is called \_\_\_\_\_

- ▶ static memory allocation
- ▶ dynamic memory allocation
- ▶ stack memory allocation
- ▶ virtual memory allocation

What purpose do classes serve?

- ▶ Data encapsulation
- ▶ Providing a convenient way of modeling real-world objects
- ▶ Simplifying code reuse
- ▶ All of the given options

Which of the following function cannot be overloaded?

- ▶ Member functions
- ▶ Utility functions
- ▶ Constructor

- ▶ Destructor

The following prototype of unary operator function indicates that it is \_\_\_\_\_ .

**Date operator++(int )**

- ▶ Member functions of post increment operator
- ▶ Member functions of pre increment operator
- ▶ Non-member functions of post increment operator
- ▶ Non-member functions of pre increment operator

Static variable which is defined in a function is initialized \_\_\_\_\_.

- ▶ Only once during its life time
- ▶ Every time the function call
- ▶ Compile time of the program
- ▶ None of the above

In the member initializer list, the data members are initialized,

- ▶ From left to right
- ▶ From right to left
- ▶ In the order in which they are defined within class
- ▶ None of the given options

If we do not indent the code properly it will \_\_\_\_\_

- ▶ Be a syntax error
- ▶ Be a logical error
- ▶ Not be an error at all

- ▶ None of the given options

Truth tables are used for analyzing \_\_\_\_\_.

- ▶ logical expressions
- ▶ arithmetic expressions
- ▶ both logical and arithmetic expressions
- ▶ none of the given options.

Static memory allocation is also known as \_\_\_\_\_

- ▶ Dynamic allocation
- ▶ Compile time allocation
- ▶ Run time allocation
- ▶ None of the given options

( Marks: 1 )

What does *getline()* member function of cin stream do?

( Marks: 1 )

When memory is allocated dynamically using new operator within the constructor of class then what is an appropriate place to de-allocate the memory?

( Marks: 2 )

What will be the output of following code, if user input a number **123**?

```
int input ;
```

```
cin >> oct >> input;
```

```
cout << hex << input ;
```

( Marks: 2

**What is memory leak?**

( Marks: 3 )

When we call calloc function to allocate memory and its return a NULL pointer what does it mean?

( Marks: 3 )

Read the given code and explain code functionality.

```
Matrix :: Matrix ( const Matrix & m )
{
    numRows = m.numRows ;
    numCols = m.numCols ;
    elements = new ( double * ) [ numRows ] ;
    for ( int i = 0 ; i < numRows ; i ++ )
        {
            elements [ i ] = new double [ numCols ] ;
            for ( int j = 0 ; j < numCols ; j ++ )
                elements [ i ] [ j ] = m.elements [ i ] [ j ] ;
        }
}
```

( Marks: 3 )

What is the keyword '**this**' and what are the uses of '**this**' pointer?

( Marks: 5 )

What do you mean by garbage collection and how it works in JAVA and C++ ?

( Marks: 5 )

Explain the concept of separation of interface from the implementation in the context of classes, using a real world example.

( Marks: 10 )

Write a simple program using the **get()** member function of **cin** object reading a text of **30** characters from the keyboard, store them in an array and then using **put()** member function of **cout** object to display them on the screen.

s( Marks: 10 )

Overload the Binary Assignment (=) Operator.

Write a program which has a class **List**, This class should have Two data members, an array of integers **list[]** and an integer variable **length** (i.e. number of elements in the list).The class should further contain a

default constructor, a **Print()** function which display the list and a Function **insert()** which insert an element in the list and Assignment (=) Operator function, which contain code for the assignment of one object to other. .

In main function define two objects **list1** and **list2** and use the statement **list2 = list1;** and use (call ) **print** function with both objects

## MCQS of cs201

( eagle\_eye )

fantasy.fear@gmail.com

### Question # 1

What does  $5 | 6$  , evaluate to in decimal where '|' is bitwise OR operator?

1) : 3

2) : 4

3) : 5

4) : 7

**Correct  
Option**      **From :**  
:

### Question # 2

We can also use member functions with cin and cout objects

- 1) : True
- 2) : FALSE
- 3) :
- 4) :

**Correct Option** : 2  
**From :**

### Question # 3

If the statements  
int j,k;  
j = 123;  
k= 234;  
int\* q, \* r;  
cout << \*q << ' ' << \* r ;  
are executed, what will be displayed?

- 1) : The values of j and k
- 2) : The addresses of q and r
- 3) : The addresses of j and k
- 4) : garbage values

**Correct Option** : 4  
**From :** Lecture 14

### Question # 4

Which one of the following operators is a unary operator?

- 1) : OR ( || )

- 2) : AND ( && )  
3) : XOR ( ^ )  
4) : Complement operator ( ~ )

**Correct Option** : 4  
**From :** **Lecture 16**

### Question # 5

The statement `i++`; is equivalent to

- 1) : `i = i + i;`  
2) : `i = i + 1;`  
3) : `i = i - 1;`  
4) : `i --;`

**Correct Option** : 2  
**From :** **Lecture 16**

### Question # 6

A variable which is defined inside a function is called

- 1) : Automatic variable  
2) : Global variable  
3) : Functional variable  
4) : None of the given option

**Correct Option** :  
**From :** **Lecture 16**

: 3

### Question # 7

If we open a file stream myfile for reading, what will give us the current position of the file pointer?

1) : tellg()

2) : tellp()

3) : seekg()

4) : seekp()

**Correct  
Option**

**From : Lecture 19**

: 1

### Question # 8

Application Software's are use to

1) : Type letters

2) : Control computer hardware

3) : Solve end user problems

4) : Develop Graphics

**Correct  
Option**

**From : Lecture 2**

: 3

### Question # 9

When we write a class template the first line must be:

- 1) :        template < class class\_type >
- 2) :        template < class data\_type >
- 3) :        template < class T >, Here T can be replaced with any name but it is preferable.
- 4) :        class template

**Correct  
Option**  
:        3

**From :        Lecture 21**

### Question # 10

When a macro takes arguments then it is called\_\_\_\_\_.

- 1) :        Function
- 2) :        Procedure
- 3) :        Parameterized macro
- 4) :        Simple macro

**Correct  
Option**  
:        3

**From :        Lecture 23**

### Question # 11

By default an array of characters is passed by value to a function,

- 1) :        TRUE
- 2) :        FALSE
- 3) :
- 4) :

**Correct  
Option**  
: 2

**From : Lecture 23**

### Question # 12

Using dynamic memory is more efficient then the static memory.

1) : True

2) : FALSE

3) :

4) :

**Correct  
Option**  
: 1

**From : Lecture 24**

### Question # 13

Using dynamic memory is more \_\_\_\_\_ then the static memory.

1) : Costly

2) : Expansive

3) : efficient

4) : Difficult

**Correct  
Option**  
: 3

**From : Lecture 24**

### Question # 14

Before exiting the program, make sure that the allocated memory has freed.

1) : True

2) : FALSE

3) :

4) :

**Correct  
Option**

**From : Lecture 24**

: 1

### Question # 15

A preprocessor directive is identified by \_\_\_\_\_ symbol

1) : #

2) : \$

3) : %

4) : ##

**Correct  
Option**

**From : Lecture 25**

: 1

### Question # 16

The default constructor has no arguments

1) : True

2) : FALSE

3) :

4) :

**Correct  
Option**  
: 1

**From : Lecture 26**

### Question # 17

The data members of the class are initialized at runtime

1) : True

2) : FALSE

3) :

4) :

**Correct  
Option**  
: 1

**From : Lecture 26**

### Question # 18

The data members of the class are initialized at creation Time

1) : True

2) : FALSE

3) :

4) :

**Correct  
Option**  
: 2

**From : Lecture 26**

### Question # 19

The function call to a default constructor

- 1) : looks like any function call, except there is no return value
- 2) : never takes any arguments
- 3) : creates but cannot initialize an object
- 4) : is made automatically when an object is created

**Correct**

**Option**

: 4

**From :**

**Lecture 26**

### Question # 20

A friend function of a class has access

- 1) : To all data member and functions of the class
- 2) : Only to other friend functions of the class
- 3) : Only to private data of the class
- 4) : Only to public data of the class

**Correct**

**Option**

: 3

**From :**

**Lecture 26**

### Question # 21

The new operator

- 1) : is used to declare objects or variables
- 2) : can not create and initialize an object

**3) :** names an object or variable

**4) :** can allocate an appropriate amount of memory for an object or variable

**Correct  
Option  
:** 4

**From : Lecture 26**

### Question # 22

Explicitly write keyword private in the class definition

**1) :** True

**2) :** FALSE

**3) :**

**4) :**

**Correct  
Option  
:** 1

**From : Lecture 26**

### Question # 23

There is a class Student, Which one of the following is a valid destructor for this class.

**1) :** Student();

**2) :** ~ Student();

**3) :** ~ Student(int);

**4) :** int~ Student();

**Correct  
Option  
:** 2

**From : Lecture 27**

### Question # 24

The reserved words public and private comes under the category

- 1) : structures
- 2) : strings
- 3) : accessibility modifiers
- 4) : types of functions

**Correct  
Option**  
: 1

**From : Lecture 27**

### Question # 25

There is a class Student, Which one of the following is a valid destructor for this class.

- 1) : Student();
- 2) : Student(int);
- 3) : ~ Student();
- 4) : ~ Student(int);

**Correct  
Option**  
: 3

**From : Lecture 27**

### Question # 26

The function call to a default constructor

- 1) : looks like any function call, except there is no return value

- 2) : is made automatically when an object is created
- 3) : creates but cannot initialize an object
- 4) : never takes any arguments

**Correct  
Option**  
: 2

**From : Lecture 27**

### Question # 27

The new operator

- 1) : can allocate an appropriate amount of memory for an object or variable
- 2) : can not create and initialize an object
- 3) : is used to declare objects or variables
- 4) : returns a pointer to an object or variable

**Correct  
Option**  
: 4

**From : Lecture 28**

### Question # 28

The new operator

- 1) : is used to declare objects or variables
- 2) : can not create and initialize an object
- 3) : names an object or variable
- 4) : can allocate an appropriate amount of memory for an object or variable

**Correct  
Option**

**From : Lecture 28**

: 4

### Question # 29

Which of the following operators can not be overloaded?

- 1) : new
- 2) : delete
- 3) : +=
- 4) : sizeof

**Correct  
Option**

: 2

**From : Lecture 28**

### Question # 30

Analyze the following code

```
class myclass
{
private:
float x,y;
public:
void myclass
(float a, float b)
{
x=a;
y=b;
}
void diplay()
{
cout<<endl<<x<<endl<<y;
}
};
```

What is wrong with the above code?

- 1) : The member functions should be private

2) : constructor must not have a return type

3) : The constructor should have no body

4) : There is no error in the given code

**Correct  
Option**  
: 2

**From : Lecture 28**

### Question # 31

this is a pointer which always points to the current object.

1) : TRUE

2) : FALSE

3) :

4) :

**Correct  
Option**  
: 1

**From : Lecture 28**

### Question # 32

Which of the following is the correct C++ syntax to allocate space dynamically for an array of 10 int?

1) : `new int(10) ;`

2) : `new int[10] ;`

3) : `int new(10) ;`

4) : `int new[10];`

**Correct  
Option**

**From : Lecture 28**

: 4

### Question # 33

The function free() returns back the allocated memory got thorough calloc and malloc to \_\_\_\_\_ .

- 1) : stack
- 2) : heap
- 3) : stack and heap
- 4) : None of the given options

**Correct Option**  
: 2  
**From : Lecture 28**

### Question # 34

Whenever new operator is used, no number of bytes or sizeof operator is required.

- 1) : True
- 2) : FALSE
- 3) :
- 4) :

**Correct Option**  
: 1  
**From : Lecture 28**

### Question # 35

If the memory in the free store is not sufficient enough to fulfill the request, malloc()

function returns NO pointer.

1) : True

2) : FALSE

3) :

4) :

**Correct  
Option**

: 2

**From : Lecture 28**

### Question # 36

A friend function

1) : must be having a prototype with no arguments

2) : can access the private data of the class that declares it a friend

3) : cannot access the data members of a class

4) : must be invoked by the class that declares it a friend

**Correct  
Option**

: 2

**From : Lecture 29**

### Question # 37

A function declaration has the same relationship to a function definition that

1) : a class definition has to an object definition

2) : an object declaration has to an object

3) : a variable has to a variable declaration

4) : a variable declaration has to the variable itself

**Correct  
Option**

: 3

**From : Lecture 29**

### Question # 38

A friend function

1) : must be having a prototype with no arguments

2) : must be invoked by the class that declares it a friend

3) : must be invoked by an object of the class that declares it a friend

4) : can access the private data of the class that declares it a friend

**Correct  
Option**

: 4

**From : Lecture 29**

### Question # 39

The reserved words public and private comes under the category

1) : structures

2) : strings

3) : accessibility modifiers

4) : types of functions

**Correct  
Option**

: 3

**From : Lecture 29**

### Question # 40

The prototype of friend functions must be written \_\_\_\_\_ the class and its definition must be written \_\_\_\_\_

- 1) :           inside, inside the class
- 2) :           inside, outside the class
- 3) :           outside, inside the class
- 4) :           outside, outside the class

**Correct Option**      **From :**           **Lecture 29**  
:           2

### Question # 41

In functions that return reference, use \_\_\_\_\_ variables.

- 1) :           Local
- 2) :           Global
- 3) :           Global or static
- 4) :           None of the given option

**Correct Option**      **From :**           **Lecture 30**  
:           3

### Question # 42

Operator Overloading is quite similar to Function Overloading.

- 1) :           True
- 2) :           FALSE

3) :

4) :

**Correct  
Option**  
: 1

**From : Lecture 30**

### Question # 43

There are two types of operators to overload: unary and binary.

1) : True

2) : FALSE

3) :

4) :

**Correct  
Option**  
: 1

**From : Lecture 30**

### Question # 44

The declarator of Minus(-) member operator function is

1) : Class-Name operator - (Class-Name rhs)

2) : operator Class-Name - ( )

3) : operator Class-Name - ( rhs)

4) : Class-Name operator - ( )

**Correct  
Option**  
:

**From : Lecture 30**

### Question # 45

Operator functions written as non-members but friends of the class, get both the operands as their arguments.

1) : True

2) : FALSE

3) :

4) :

**Correct  
Option**

: 1

**From :**

**Lecture 30**

### Question # 46

We cannot do arithmetic with references like pointers.

1) : True

2) : FALSE

3) :

4) :

**Correct  
Option**

: 1

**From :**

**Lecture 30**

### Question # 47

In functions that return reference, use global or static variables.

1) : True

2) : FALSE

3) :

4) :

**Correct  
Option**  
: 1

**From : Lecture 30**

### Question # 48

In functions that return reference, use only static variables.

1) : True

2) : FALSE

3) :

4) :

**Correct  
Option**  
: 2

**From : Lecture 30**

### Question # 49

The reference data types are used as ordinary variables without any dereference operator.

1) : True

2) : FALSE

3) :

4) :

**Correct  
Option**

**From : Lecture 30**

: 1

### Question # 50

Which of the following operators can not be overloaded?

- 1) : new
- 2) : delete
- 3) : +=
- 4) : sizeof

**Correct  
Option**

: 3

**From : Lecture 31**

### Question # 51

The declarator of Plus (+) member operator function is

- 1) : Class-Name operator + (Class-Name rhs)
- 2) : operator Class-Name + ( )
- 3) : operator Class-Name + ( rhs)
- 4) : Class-Name operator + ( )

**Correct  
Option**

: 1

**From : Lecture 31**

### Question # 52

We can create a new operator through operator overloading.

1) : TRUE

2) : FALSE

3) :

4) :

**Correct  
Option**

: 2

**From : Lecture 31**

### Question # 53

In overloading the assignment (=) operator, which object will call the operator function?

1) : Right object of the assignment operator

2) : Left object of the assignment operator

3) : Both objects will call the assignment operator

4) : No object will call the assignment operator

**Correct  
Option**

: 3

**From : Lecture 31**

### Question # 54

Which statement about operator overloading is false?

1) : New operators can never be created

2) : Certain overloaded operators can change the number of arguments they take.

3) : The precedence of an operator cannot be changed by overloading.

4) : Overloading cannot change how an operator works on built-in types.

**Correct  
Option**  
: 2

**From : Lecture 31**

### Question # 55

Initializing the data members in the definition of the class is \_\_\_\_\_

- 1) : syntax error
- 2) : logical error
- 3) : not an error
- 4) : none of the given options

**Correct  
Option**  
: 2

**From : Lecture 31**

### Question # 56

When an array of object is created dynamically then there is no way to provide parameterized constructors for array of objects.

- 1) : True
- 2) : FALSE
- 3) :
- 4) :

**Correct  
Option**  
: 1

**From : Lecture 32**

### Question # 57

If we define an identifier with the statement `#define PI 3.1415926` then during the execution of the program the value of PI \_\_\_\_\_.

- 1) : can not be replaced
- 2) : None of the given options
- 3) : Remain constant.
- 4) : can be changed by some operation

**Correct Option** : 3  
**From :** **Lecture 34**

#### Question # 58

The default constructor is defined by the C++ compiler automatically for every class that has no default constructor (parameterless constructor) defined already.

- 1) : True
- 2) : FALSE
- 3) :
- 4) :

**Correct Option** : 1  
**From :** **Lecture 36**

#### Question # 59

The default constructor (parameterless constructor) is called for each element in the array allocated with new.

- 1) : True
- 2) : FALSE

3) :

4) :

**Correct  
Option**  
: 1

**From :**

**Lecture 36**

### Question # 60

The new operator returns a Type \*, accepts a parameter of type size\_t.

1) : True

2) : FALSE

3) :

4) :

**Correct  
Option**  
: 2

**From :**

**Lecture 36**

### Question # 61

The new operator returns a void \*, accepts a parameter of type size\_t.

1) : True

2) : FALSE

3) :

4) :

**Correct  
Option**  
: 1

**From :**

**Lecture 36**

### Question # 62

The delete operator returns nothing (void) and accepts a pointer of void \* to the memory block.

1) : True

2) : FALSE

3) :

4) :

**Correct  
Option**

: 1

**From :**

**Lecture 36**

### Question # 63

The delete operator returns nothing (void) and accepts a pointer of type \* to the memory block.

1) : True

2) : FALSE

3) :

4) :

**Correct  
Option**

: 2

**From :**

**Lecture 36**

### Question # 64

By overloading new and delete operators, only allocation and deallocation part can be overridden.

- 1) : True
- 2) : FALSE
- 3) :
- 4) :

**Correct Option** : 1  
**From :** Lecture 36

### Question # 65

new and delete can overload in c++

- 1) : True
- 2) : FALSE
- 3) :
- 4) :

**Correct Option** : 2  
**From :** Lecture 36

### Question # 66

By overloading the array operator ( [] ), one can implement mechanism to check for array bound.

- 1) : True
- 2) : FALSE
- 3) :
- 4) :

**Correct  
Option**  
: 1

**From : Lecture 36**

### Question # 67

Stream insertion ( << ) and extraction operators ( >> ) are always implemented as \_\_\_\_\_ functions.

- 1) : Member
- 2) : non-member
- 3) : Inside
- 4) : Out Side

**Correct  
Option**  
: 2

**From : Lecture 37**

### Question # 68

For operator >>, the second parameter must also be passed by reference.

- 1) : True
- 2) : FALSE
- 3) :
- 4) :

**Correct  
Option**  
: 1

**From : Lecture 37**

### Question # 69

Static member functions

- 1) : must be declared inside the class definition, but defined outside it
- 2) : must be declared private
- 3) : have multiple copies for the entire class
- 4) : can access only static data

**Correct  
Option**  
: 4

**From : Lecture 38**

### Question # 70

A copy constructor

- 1) : creates an object initialized with the same data as an existing object
- 2) : takes an arbitrary number of arguments
- 3) : copies the data of any two constructors in that class
- 4) : takes no arguments

**Correct  
Option**  
: 1

**From : Lecture 39**

### Question # 71

A copy constructor

- 1) : takes no arguments
- 2) : copies the data of any two constructors in that class
- 3) : creates an object initialized with the same data as an existing object

4) : creates a new object that later may be assigned the data of an existing object

**Correct  
Option**  
: 3

**From : Lecture 39**

### Question # 72

A class can contain instances of other classes as its data members.

1) : True

2) : FALSE

3) :

4) :

**Correct  
Option**  
: 1

**From : Lecture 40**

### Question # 73

The inner data members of the object are constructed and then the object itself.

1) : True

2) : FALSE

3) :

4) :

**Correct  
Option**  
: 1

**From : Lecture 40**

### Question # 74

The order of destruction of an object is equal to this construction order, where the outer object is destroyed first before the inner data members.

1) : True

2) : FALSE

3) :

4) :

**Correct  
Option**  
:

**From :**

**Lecture 40**

2

### Question # 75

Initializer list is used to initialize the inner objects at the construction time.

1) : True

2) : FALSE

3) :

4) :

**Correct  
Option**  
:

**From :**

**Lecture 40**

1

### Question # 76

In C++, we can have structures or classes defined inside classes. Classes defined within other classes are called \_\_\_\_\_ classes.

1) : nested

- 2) : Child
- 3) : Parent
- 4) : Branch

**Correct Option** : 1  
**From :** **Lecture 40**

### Question # 77

Static member functions

- 1) : must be declared inside the class definition, but defined outside it
- 2) : must be declared private
- 3) : have multiple copies for the entire class
- 4) : can access only static data

**Correct Option** : 4  
**From :** **Lecture 41**

### Question # 78

The template functions do NOT promote the code reuse

- 1) : TRUE
- 2) : FALSE
- 3) :
- 4) :

**Correct Option** :  
**From :** **Lecture 41**

: 2

### Question # 79

In the member initializer list, the data members are initialized,

- 1) : From left to right
- 2) : From right to left
- 3) : In the order in which they are defined within class
- 4) : None of the given options

**Correct  
Option**  
: 3

**From : Lecture 41**

### Question # 80

It is possible to define a class within another class.

- 1) : TRUE
- 2) : FALSE
- 3) :
- 4) :

**Correct  
Option**  
: 1

**From : Lecture 41**

### Question # 81

When ever dynamic memory allocation is made in C/C++, it is freed\_\_\_\_\_.

- 1) : Explicitly
- 2) : Implicitly
- 3) : Both explicitly and implicitly
- 4) : None of the given options

**Correct  
Option**  
: 1

**From : Lecture 42**

### Question # 82

User-defined manipulators are allowed in c++.

- 1) : TRUE
- 2) : FALSE
- 3) :
- 4) :

**Correct  
Option**  
: 1

**From : Lecture 42**

### Question # 83

It is a way of reusing the code when we contain objects of our already written classes into a new class,

- 1) : TRUE
- 2) : False
- 3) :
- 4) :

**Correct  
Option**  
: 1

**From : Lecture 42**

**Question # 84**

Structured Query Language is used for \_\_\_\_\_

- 1) : Databases Management
- 2) : Networks
- 3) : Writing Operating System
- 4) : none of the given options

**Correct  
Option**  
: 1

**From : Lecture 45**

**Question # 85**

In if structure the block of statements is executed only,

- 1) : Type letters
- 2) : When it contain arithmetic operators
- 3) : When it contain logical operators
- 4) : When the condition is true

**Correct  
Option**  
: 4

**From : Lecture 6**

**Question # 86**

Loader transfers the executable code from main memory to hard disk.

1) : TRUE

2) : FALSE

3) :

4) :

**Correct  
Option**

: 2

**From : Lecture 6**

### Question # 87

When break statement is encountered in switch statement, it

1) : Stops the entire program

2) : Stops the execution of current statement

3) : Exits from switch statement

4) : None of the given options

**Correct  
Option**

: 3

**From : Lecture 7**

**FINALTERM EXAMINATION**

Spring 2010

CS201- Introduction to Programming

Ref No:

Time: 90 min

**Question No: 1 ( Marks: 1 ) - Please choose one**

---

\*.doc is \_\_\_\_\_ by type.

- ▶ Sequential File
- ▶ Random Access File
- ▶ Data File
- ▶ Record File

**Question No: 2 ( Marks: 1 ) - Please choose one**

---

Which of the following is NOT a preprocessor directive?

- ▶ #error
- ▶ #define
- ▶ #line
- ▶ #undef

**Question No: 3 ( Marks: 1 ) - Please choose one**

---

The return type of operator function must always be void.

- ▶ True
- ▶ False

**Question No: 4 ( Marks: 1 ) - Please choose one**

---

What does (**\*this**) represents?

- ▶The current function of the class
- ▶The current pointer of the class
- ▶The current object of the class
- ▶A value of the data member

**Question No: 5 ( Marks: 1 ) - Please choose one**

---

The statement **cin.get ();** is used to,

- ▶Read a string from keyboard
- ▶Read a character from keyboard
- ▶Read a string from file
- ▶Read a character from file

**Question No: 6 ( Marks: 1 ) - Please choose one**

---

When we do dynamic memory allocation in the constructor of a class, then it is necessary to provide a destructor.

- ▶True
- ▶False

**Question No: 7 ( Marks: 1 ) - Please choose one**

---

Overloaded new operator function takes parameter of type *size\_t* and returns

- ▶void (nothing)
- ▶void pointer

▶object pointer

▶int pointer

**Question No: 8 ( Marks: 1 ) - Please choose one**

---

The second parameter of operator functions for << and >> are objects of the class for which we are overloading these operators.

▶True

▶False

**Question No: 9 ( Marks: 1 ) - Please choose one**

---

\_\_\_\_\_ C++  
is a case-sensitive language

▶True

▶False

**Question No: 10 ( Marks: 1 ) - Please choose one**

---

\_\_\_\_\_ To  
include code from the library in the program, such as iostream, a directive would be called up using this  
command.

▶#include "iostream.h"

▶include <iostream.h>

▶include <iostream.h>

▶#include <iostream.h>

**Question No: 11 ( Marks: 1 ) - Please choose one**

---

template function must have only generic data types.

True

False

**Question No: 12 ( Marks: 1 ) - Please choose one**

---

Template class can not have static variables.

True

False

**Question No: 13 ( Marks: 1 ) - Please choose one**

---

What will be the correct syntax to assign an array named *arr* of 5 elements to a pointer *ptr*?

- \*ptr = arr ;
- ptr = arr ;
- \*ptr = arr[5] ;
- ptr = arr[5] ;

**Question No: 14 ( Marks: 1 ) - Please choose one**

---

What will be the correct syntax to access the value of fourth element of an array using pointer *ptr*?

ptr[3]

\*(ptr+3)

▶\*(ptr+3)

▶Both 1 and 3

**Question No: 15 ( Marks: 1 ) - Please choose one**

\_\_\_\_\_ If most significant bit of un-signed number is 1 then it represents a positive number.

▶True

▶False

**Question No: 16 ( Marks: 1 ) - Please choose one**

\_\_\_\_\_ If there is a symbol (& sign) used with the variable name followed by data type then it refers to \_\_\_\_\_ and if & is being used with variable name then it refers to \_\_\_\_\_.

▶Address of variable, reference variable

▶Reference variable, value of variable

▶Reference variable, address of variable

▶Address of variable, value of variable

**Question No: 17 ( Marks: 1 ) - Please choose one**

\_\_\_\_\_ We can also do conditional compilation with preprocessor directives.

▶True

▶False

**Question No: 18 ( Marks: 1 ) - Please choose one**

\_\_\_\_\_ The default value of a parameter can be provided inside the \_\_\_\_\_

▶function prototype

▶function definition

- ▶both function prototype or function definition
- ▶none of the given options.

**Question No: 19 ( Marks: 1 ) - Please choose one**

---

Classes defined inside other classes are called \_\_\_\_\_ classes

- ▶looped
- ▶nested
- ▶overloaded
- ▶none of the given options.

**Question No: 20 ( Marks: 1 ) - Please choose one**

---

What purpose do classes serve?

- ▶Data encapsulation
- ▶Providing a convenient way of modeling real-world objects
- ▶Simplifying code reuse
- ▶All of the given options

**Question No: 21 ( Marks: 1 ) - Please choose one**

---

Every class contains \_\_\_\_\_.

- ▶Constructor
- ▶Destructor
- ▶Both a constructor and a destructor
- ▶None of the given options

**Question No: 22 ( Marks: 1 ) - Please choose one**

---

operator is used to allocate memory from the free store during **new**

- ▶Compile Time
- ▶Run Time
- ▶Link Time
- ▶None of the given options

**Question No: 23 ( Marks: 1 ) - Please choose one**

---

When an object of a class is defined inside another class then,

- ▶Destructor of enclosing class will be called first
- ▶Destructor of inner object will be called first
- ▶Constructor and Destructor will be called simultaneously
- ▶None of the given options

**Question No: 24 ( Marks: 1 ) - Please choose one**

---

It is possible to define a class within another class.

- ▶True
- ▶False

**Question No: 25 ( Marks: 1 ) - Please choose one**

---

and Delete are also used with \_\_\_\_\_ and data types as well. **New**

- ▶Class, Objects
- ▶Structures, Pointers
- ▶Both Class and structures

▶None of above

**Question No: 26 ( Marks: 1 ) - Please choose one**

---

With  
New keyword, data types and class members are initialized with meaningful values instead of garbage.

▶True

▶False

**Question No: 27 ( Marks: 2 )**

---

How  
many arguments a Unary Operator take? Can we make a binary operator as unary operator?

Ans: Unary operator takes only one argument like `i++` or `i--` (Post increment or post decrement operators for integers) or `++i`, `--i` (Pre increment or pre decrement operators for integers) ,we can not make Unary operator as binary or binary as Unary operator.

**Question No: 28 ( Marks: 2 )**

---

Which arithmetic operators cannot have a floating point operand?

Ans:

Modulus operator

This operator can only be used with integer operands ONLY

**Question No: 29 ( Marks: 2 )**

---

What are manipulators? Give one example.

Ans:

The manipulators are like something that can be inserted into stream, effecting a change in the behavior. For example, if we have a floating point number, say pi ( $\pi$ ), and have written it as `float pi = 3.1415926` ; Now there is need of printing the value of pi up to two decimal places i.e. 3.14 . This is a formatting functionality. For this, we have a *manipulator* that tells about width and number of decimal points of a number being printed.

Some manipulators are parameter less. We simply use the name of the manipulator that works. For example, we have been using *endl*, which is actually a manipulator, not data. When we write *cout << endl* ; a new line is output besides flushing the buffer. Actually, it manipulates the output stream.

**Question No: 30 ( Marks: 2 )**

---

Write down piece of code that will declare a matrix of 3x3. And initialize all its locations with 0;

**Ans:**

```
int matrix [3] [3] ;
```

```
matrix [0] [0] = 0;
```

```
matrix [0] [1] = 0;
```

```
matrix [0] [2] = 0;
```

```
matrix [1] [0] = 0;
```

```
matrix [1] [2] = 0;
```

```
matrix [1] [2] = 0;
```

```
matrix [2] [0] = 0;
```

```
matrix [2] [1] = 0;
```

```
matrix [2] [2] = 0;
```

we can also do it as given below

```
int matrix [3][3] = { 0 }; //all elements 0
```

**Question No: 31 ( Marks: 3 )**

---

Which one (copy constructor or assignment operator) will be called in each of the following code segment?

1) Matrix m1 (m2);

2) Matrix m1, m2;

m1 = m2;

3) Matrix m1 = m2;

**Ans:**

1) Matrix m1 (m2); **copy constructor**

2) Matrix m1, m2;

m1 = m2; **assignment operator**

3) Matrix m1 = m2; **assignment operator**

**Question No: 32 ( Marks: 3 )**

---

What will be the output of following function if we call this function by passing int 5?

```
template <class T>
T reciprocal(T x)
{
return (1/x);
}
```

**Ans:**

**1/5**

**Question No: 33 ( Marks: 3 )**

---

**Identify the errors in the following member operator function and also correct them.**

```
math * operator(math m);
```

```
math * operator (math m)
```

```
{
```

```
    math temp;
```

```
    temp.number= number * number;
```

```
    return number;
```

```
}
```

ANS:

The errors are in the arguments of the member operation function and also in the body of operator member function.

Correct function should be

```
math *operator(math *m);
```

```
math *operator (math *m)
```

```
{
```

```
    math temp;
```

```
    temp = m;
```

```
    temp.number= number * number;
```

```
    return temp.number;
```

```
}
```

**Question No: 34 ( Marks: 5 )**

---

Write a program which defines three variables of type double which store three different values including decimal points, using setprecision manipulators to print all these values with different number of digits after the decimal number.

Ans:

```
#include <iostream>
```

```
#include <iomanip>
```

```
int main ()
```

```
{
```

```
    double x1 = 12345624.72345
```

```
    double x2 = 987654.12345
```

```
    double x3 = 1985.23456
```

```
    cout << setprecision (3) << x1<< endl;
```

```
    cout << setprecision (4) << x2 << endl;
```

```
    cout << setprecision (5) << x3<< endl;
```

```
    return 0;
```

```
}
```

**Question No: 35 ( Marks: 5 )**

---

What are the advantages and disadvantages of using templates?

Ans:

Many things can be possible without using templates but they do offer several clear advantages not offered by any other techniques:

**Advantages:**

- Templates are easier to write than writing several versions of your similar code for different types. You create only one generic version of your class or function instead of manually creating specializations.
- Templates are type-safe. This is because the types that templates act upon are known at compile time, so the compiler can perform type checking before errors occur.
- Templates can be easier to understand, since they can provide a straightforward way of abstracting type information.
- They help in utilizing compiler optimizations to the extreme. Then of course there is room for misuse of the templates. On one hand they provide an excellent mechanism to create specific type-safe classes from a generic definition with little overhead.

**Disadvantages:**

On the other hand, if misused

- Templates can make code difficult to read and follow depending upon coding style.
- They can present seriously confusing syntactical problems esp. when the code is large and spread over several header and source files.
- Then, there are times, when templates can "excellently" produce nearly meaningless compiler errors thus requiring extra care to enforce syntactical and other design constraints. A common mistake is the angle bracket problem.

**Question No: 36 ( Marks: 5 )**

---

Suppose a program has a math class having only one data member **number**.

Write the declaration and definition of operator function to overload + operator for the statements of main function.

```
math obj1, obj2;  
obj2= 10 + obj1 ;
```

**Ans:**

```
#include <iostream.h>
```

```
math
```

```
{
```

```
    mth operator + (obj1,obj2)
```

```
    mth operator + (obj1,obj2)
```

```
{
```

```
    mth operator + (obj1,obj2)
```

```
    mth operator + (obj1,obj2)
```

```
}
```

```
}
```

```
.....
```

**CS201 final paper 2010**

**FINALTERM EXAMINATION**

**Question No: 1 ( Marks: 1 ) - Please choose one**

If it is required to copy an array to another array then,

- ▶Both arrays must be of the same size and data type
  
- ▶Both arrays may be of different size
  
- ▶Both arrays may be of different data type
  
- ▶Both arrays may be of different size and type

**Question No: 2 ( Marks: 1 ) - Please choose one**

Dealing with structures and functions passing by reference is the most economical method

- ▶True
  
- ▶False

**Question No: 3 ( Marks: 1 ) - Please choose one**

eof( ), bad( ), good( ), clear( ) all are manipulators.

▶True

▶False

**Question No: 4 ( Marks: 1 ) - Please choose one**

Overloaded new operator function takes parameter of type *size\_t* and returns

▶void (nothing)

▶void pointer

▶object pointer

▶int pointer

**Question No: 5 ( Marks: 1 ) - Please choose one**

When new operator is overloaded at global level then corresponding built-in new operator will not be visible to whole of the program.

▶True

▶False

**Question No: 6 ( Marks: 1 ) - Please choose one**

If there is more than one statement in the block of a for loop, which of the following must be placed at the beginning and the ending of the loop block?

▶parentheses ( )

▶braces { }

▶brackets [ ]

▶arrows < >

**Question No: 7 ( Marks: 1 ) - Please choose one**

The return type of a function that do not return any value must be \_\_\_\_\_

▶float

▶int

▶void

▶double

**Question No: 8 ( Marks: 1 ) - Please choose one**

UNIX has been developed in \_\_\_\_\_ language.

▶JAVA

▶B

▶C

▶FORTRAN

**Question No: 9 ( Marks: 1 ) - Please choose one**

Like member functions, \_\_\_\_\_ can also access the private data members of a class.

▶Non-member functions

▶Friend functions

▶Any function outside class

▶None of the given options

**Question No: 10 ( Marks: 1 ) - Please choose one**

Which of the following statement is best regarding declaration of friend function?

- ▶Friend function must be declared after public keyword.
- ▶Friend function must be declared after private keyword.
- ▶Friend function must be declared at the top within class definition.
- ▶It can be declared anywhere in class as these are not affected by the public and private keywords.

**Question No: 11 ( Marks: 1 ) - Please choose one**

The operator function overloaded for an Assignment operator (=) must be

▶Non-member function of class

▶Member function of class

▶Friend function of class

▶None of the given options

**Question No: 12 ( Marks: 1 ) - Please choose one**

The **endl** and **flush** are \_\_\_\_\_

▶Functions

▶Operators

▶Manipulators

▶Objects

**Question No: 13 ( Marks: 1 ) - Please choose one**

If a symbolic constant has been defined, it will be an error to define it again.

▶True

▶False

**Question No: 14 ( Marks: 1 ) - Please choose one**

The operator used for casting, in C, is standard \_\_\_\_\_ operator.

▶none of the given options.

▶cast

▶cost

▶const

**Question No: 15 ( Marks: 1 ) - Please choose one**

Constructors can not be overloaded like ordinary functions.

▶True

▶False

**Question No: 16 ( Marks: 1 ) - Please choose one**

Which of the following function call is correct for the function prototype?

`defaultParameters ( int a, int b = 7, char z = '*' );`

▶`defaultParameters (5);`

▶`defaultParameters (5, '8');`

▶defaultParameters (6, '#');

▶defaultParameters (0, 0, '\*', 0);

**Question No: 17 ( Marks: 1 ) - Please choose one**

When an operator function is defined as member function for a binary Plus (+) operator then the number of argument it take is/are.

▶Zero

▶One

▶Two

▶N arguments

**Question No: 18 ( Marks: 1 ) - Please choose one**

We can not define a variable of user-defined data type in the class.

▶True

▶False

**Question No: 19 ( Marks: 1 ) - Please choose one**

When an object of a class is defined inside an other class then,

▶Constructor of enclosing class will be called first

▶Constructor of inner object will be called first

▶Constructor and Destructor will be called simultaneously

▶None of the given options

**Question No: 20 ( Marks: 1 ) - Please choose one**

The appropriate data type to store the number of rows and columns of the matrix is\_\_\_\_\_.

▶float

▶int

▶char

▶none of the given options.

**Question No: 21 ( Marks: 1 ) - Please choose one**

Class is a user defined\_\_\_\_\_.

▶data type

▶memory referee

▶value

▶none of the given options.

**Question No: 22 ( Marks: 1 ) - Please choose one**

A pointer variable can be,

▶Decrementd

▶Incremented

▶Multiplied

▶Both Decrementd and Decrementd

**Question No: 23 ( Marks: 1 ) - Please choose one**

NULL value has been defined in \_\_\_\_\_ and \_\_\_\_\_ header files.

▶strings.h and iostream.h

▶ctype.h and conio.c

▶conio.c and conio.h

▶stdlib.h and stddef.h

**Question No: 24 ( Marks: 1 ) - Please choose one**

A Matrix can be composed of ints, floats or doubles as their elements. Best way is to handle this ,

\_\_\_\_\_

▶Write a separate class to handle each

▶Use templates

▶Use strings to store all types

▶None of the given options

**Question No: 25 ( Marks: 1 ) - Please choose one**

"setprecision" manipulator will set

▶The number of digits after the decimal point

▶The number of digits before the decimal point

▶The number of digits in a number

▶None of the given options

**Question No: 26 ( Marks: 1 ) - Please choose one**

Which of the following option will be true, if we overload "-" operator?

- ▶only - operator needs to be overloaded
- ▶Minus (-) and = operators need to be overloaded
- ▶the -= operator need to be overloaded explicitly
- ▶the - and = operators need to be overloaded implicitly

**Question No: 27 ( Marks: 2 )**

Suppose there is a template function '**func**' having argument of type U and return type T. What will be the C++ syntax to call this function, passing a variable '**x**' of type double and returning an int type?  
<http://vuattach.ning.com/>

**Question No: 28 ( Marks: 2 )**

Which variable will be used in inner code block if we have the same names of variable at outer code block and inner code block?

**Question No: 29 ( Marks: 2 )**

What is the benefit of reference and where can we use it?

**Question No: 30 ( Marks: 2 )**

Write the C++ code for the declaration of overloaded stream insertion and stream extraction operator for the object **d** of type **Date**.

**Question No: 31 ( Marks: 3 )**

What will be the output of following functions if we call these functions three times?

**1)**

```
void func1(){  
    int x = 0;  
    x++;  
    cout << x << endl;  
}
```

**2)**

```
void func2(){  
    static int x = 0 ;  
    x++;  
    cout << x << endl ;  
}
```

**Question No: 32 ( Marks: 3 )**

If the requested memory is not available in the system then what does **calloc/malloc** and **new** operator return?

**Question No: 33 ( Marks: 3 )**

Suppose an object of class A is declared as data member of class B.

(i) The constructor of which class will be called first?

(ii) The destructor of which class will be called first?

**Question No: 34 ( Marks: 5 )**

What is difference between Unary and binary operators and how they can be overloaded?

**Question No: 35 ( Marks: 5 )**

Suppose we have the following class.

```
class Matrix  
  
{  
  
private:  
  
int Elements[3][3];  
  
};
```

Write the operator function of stream extraction operator (>>) for this class.

**Question No: 36 ( Marks: 5 )**

What is meant by user interface and class interface in C++ ? And what role a class interface can play in user interface [Marks 5] <http://vuattach.ning.com/>

**FINALTERM EXAMINATION**

Spring 2009

CS201- Introduction to Programming

**Question No: 1 ( Marks: 1 ) - Please choose one**

---

There are mainly ----- types of software

▶ Two

▶ Three

▶ Four

▶ Five

**Question No: 2 ( Marks: 1 ) - Please choose one**

---

When  $x = 7$ ; then the expression  $x \% 2$ ; will calculate the value of  $x$  as,

▶ 1

▶ 3

▶ 7

▶ 2

**Question No: 3 ( Marks: 1 ) - Please choose one**

---

A pointer variable can be,

▶ Decrement only

▶ Increment only

▶ Multiplied only

- ▶ Both 1 and 2

**Question No: 4 ( Marks: 1 ) - Please choose one**

---

setprecision is a parameter less manipulator.

- ▶ True
- ▶ False

**Question No: 5 ( Marks: 1 ) - Please choose one**

---

We can change a Unary operator to Binary operator through operator overloading.

- ▶ False
- ▶ True

**Question No: 6 ( Marks: 1 ) - Please choose one**

---

**delete** operator is used to return memory to free store which is allocated by the **new** operator

▶ True

▶ False

**Question No: 7 (Marks: 1) - Please choose one**

---

When we do dynamic memory allocation in the constructor of a class, then it is necessary to provide a destructor.

▶ True

▶ False

**Question No: 8 ( Marks: 1 ) - Please choose one**

---

What is the functionality of the following statement?

**String str[5] = {String("Programming"), String("CS201")};**

▶ Default constructor will call for all objects of array

▶ Parameterized constructor will call for all objects of array

    ▶ Parameterized constructor will call for first 2 objects and default constructor for remaining objects

▶ Default constructor will call for first 3 objects and Parameterized constructor for remaining objects

**Question No: 9 ( Marks: 1 ) - Please choose one**

---

What is the sequence of event(s) when allocating memory using new operator?

- ▶ Only block of memory is allocated for objects
  
- ▶ Only constructor is called for objects
  
- ▶ Memory is allocated first before calling constructor
  
- ▶ Constructor is called first before allocating memory

**Question No: 10 ( Marks: 1 ) - Please choose one**

---

Deleting an array of objects without specifying [] brackets may lead to memory leak

- ▶ True
  
- ▶ False

**Question No: 11 ( Marks: 1 ) - Please choose one**

---

Which of the following data type will be assumed if no data type is specified with constant?

▶ short

▶ float

▶ int

▶ double

**Question No: 12 ( Marks: 1 ) - Please choose one**

---

There is an array of characters having name 'course' that has to be initialized by string 'programming' which of the following is the correct way to do this,

- i.** `course[] = {'p', 'r', 'o', 'g', 'r', 'a', 'm', 'm', 'i', 'n', 'g'};`
- ii.** `course[] = 'programming';`
- iii.** `course[12] = "programming";`
- iv.** `course = "programming";`

Choose the correct options.

▶ (i) and (ii) only

▶ (i) and (iv) only

▶ (i) and (iii) only

▶ (ii) and (iii) only

**Question No: 13 ( Marks: 1 ) - Please choose one**

---

What will be the correct syntax of the following statement?

*ptr is a constant pointer to integer.*

▶ `const int *ptr ;`

▶ `const *int ptr ;`

▶ `int const *ptr ;`

▶ `int *const ptr ;`

**Question No: 14 ( Marks: 1 ) - Please choose one**

---

Overloaded member operator function is always called by \_\_\_\_\_

▶ Class

▶ Object

▶ Compiler

▶ Primitive data type

**Question No: 15 ( Marks: 1 ) - Please choose one**

---

Loader loads the executable code from hard disk to main memory.

▶ True

▶ False

**Question No: 16 ( Marks: 1 ) - Please choose one**

---

Which of the following is the correct C++ syntax to allocate space dynamically for an array of 10 int?

▶ `new int(10);`

▶ `new int[10];`

▶ `int new(10);`

▶ `int new[10];`

**Question No: 17 ( Marks: 1 ) - Please choose one**

---

The prototype of friend functions must be written \_\_\_\_ the class and its definition must be written \_\_\_\_

▶ inside, inside the class

▶ inside, outside the class

▶ outside, inside the class

▶ outside, outside the class

**Question No: 18 ( Marks: 1 ) - Please choose one**

---

Like member functions, \_\_\_\_\_ can also access the private data members of a class.

▶ Non-member functions

▶ Friend functions

▶ Any function outside class

▶ None of the given options

**Question No: 19 ( Marks: 1 ) - Please choose one**

---

To perform manipulation with input/output, we have to include \_\_\_\_\_ header file.

▶ `iostream.h`

▶ `stdlib.h`

▶ `iomanip.h`

▶ `fstream.h`

**Question No: 20 ( Marks: 1 ) - Please choose one**

---

The **endl** and **flush** are \_\_\_\_\_

▶ Functions

▶ Operators

▶ Manipulators

▶ Objects

**Question No: 21 ( Marks: 1 ) - Please choose one**

---

If we want to use stream insertion and extraction operators with \_\_\_\_\_ then we have to overload these operators.

▶ int, float, double

▶ objects of class

▶ int, float, object

- ▶ int, char, float

**Question No: 22 ( Marks: 1 ) - Please choose one**

---

The static data members of a class can be accessed by \_\_\_\_\_

- ▶ only class
- ▶ only objects
- ▶ both class and objects
- ▶ none of given options

**Question No: 23 ( Marks: 1 ) - Please choose one**

---

Classes defined inside other classes are called \_\_\_\_\_ classes

- ▶ looped
- ▶ nested
- ▶ overloaded
- ▶ none of the given options.

**Question No: 24 ( Marks: 1 ) - Please choose one**

---

Which value is returned by the destructor of a class?

- ▶ A pointer to the class.
- ▶ An object of the class.
- ▶ A status code determining whether the class was destructed correctly
- ▶ Destructors do not return a value.

- ▶ None of the given options

None of the given options

**Question No: 26 ( Marks: 1 ) - Please choose one**

---

When the compiler overloads the assignment (=) operator by default then \_\_\_\_\_

- ▶ compiler does member wise assignment.
- ▶ compiler does not allow default overload of assignment (=) operator
- ▶ member of the class are not assigned properly
- ▶ None of the given options

**Question No: 28 ( Marks: 1 ) - Please choose one**

---

Static variable which is defined in a function is initialized \_\_\_\_\_.

- ▶ Only once during its life time
- ▶ Every time the function call
- ▶ Compile time of the program
- ▶ None of the above

**Question No: 29 ( Marks: 1 ) - Please choose one**

---

The appropriate data type to store the number of rows and columns of the matrix is\_\_\_\_\_.

- ▶ float
- ▶ int

▶ char

▶ none of the given options.

**Question No: 30 ( Marks: 1 ) - Please choose one**

---

Copy constructor becomes necessary while dealing with \_\_\_\_\_ allocation in the class.

▶ Dynamic memory

▶ Static memory

▶ Both Dynamic and Static memory

▶ None of the given options

**Question No: 31 ( Marks: 1 )**

---

What is drawback of writing the definitions of all the functions before main function?

**Question No: 32 ( Marks: 1 )**

---

How do we provide the default values of function parameters?

**Question No: 33 ( Marks: 2 )**

---

What is difference between endl and \n?

**Question No: 34 ( Marks: 2 )**

---

When does an object get destroyed?

**Question No: 35 ( Marks: 3 )**

---

What is the difference between structure and class?

**Question No: 36 ( Marks: 3 )**

---

What will be the output of following functions if we call these functions three times?

**1)**

```
void func1(){  
int x = 0;  
x++;  
cout << x << endl;  
}
```

**2)**

```
void func2(){  
static int x = 0 ;  
x++;  
cout << x << endl ;  
}
```

**Question No: 37 ( Marks: 3 )**

---

Why stream insertion and stream extraction operators cannot be overloaded as member functions?

**Question No: 38 ( Marks: 5 )**

---

What is difference between Unary and binary operators and how they can be overloaded?

**Question No: 39 ( Marks: 5 )**

---

What steps we must follow to design good program?

**Question No: 40 ( Marks: 10 )**

---

Write the program that inputs an **octal** number from the user and then display the entered octal number into **hexadecimal** number using **manipulators** (parameter-less, parameterized) and **member function** of input/output streams.

**Question No: 41 ( Marks: 10 )**

---

Develop a class **Vector** having two data members; x and y.

The class should also provide the following Overloaded operator capabilities.

- a) Overload the addition operator(+) to add two **Vectors**
- b) Overload the assignment operator(=) to assign **Resultant Vector**
- c) Write function **Display()** to display x, y coordinates

**Note:** Addition of vector Let suppose there are two vectors A and B with their x, y coordinates.

Time: 90 min

Marks: 58

Student Info	
Student ID:	bcxxxxxxxx
Center:	OPKST
Exam Date:	09-08-2001

**For Teacher's Use Only**

**Question No: 1 ( Marks: 1 ) - Please choose one**

---

In if structure the block of statements is executed only,

▶When the condition is false

▶When it contain arithmetic operators

▶When it contain logical operators

▶When the condition is true

**Question No: 2 ( Marks: 1 ) - Please choose one**

---

Header file: **fstream.h** includes the definition of the stream classes \_\_\_\_\_.

▶ifstream, fstream, cout

▶ifstream, fstream, ofstream

▶fstream, cin, cout

▶None of the above

**Question No: 3 ( Marks: 1 ) - Please choose one**

---

To access the data members of structure \_\_\_\_\_ is used.

▶dot operator (.)

▶\* operator

▶[] operator

▶None of given.

**Question No: 4** <http://vustudents.ning.com> ( Marks: 1 ) - Please choose one

---

eof( ), bad( ), good( ), clear( ) all are manipulators.

▶True

▶False

**Question No: 5** ( Marks: 1 ) - Please choose one

---

Which kind of functions can access private member variables of a class?

▶Friend functions of the class

▶Private member functions of the class

▶Public member functions of the class

▶Friend, private and public functions

**Question No: 6 ( Marks: 1 ) - Please choose one**

---

The return type of operator function must always be void.

▶True

▶False

**Question No: 7 ( Marks: 1 ) - Please choose one**

---

Friend function of a class is \_\_\_\_\_ .

▶Member function

▶Non-member function

▶Private function

▶Public function

**Question No: 8 ( Marks: 1 ) - Please choose one**

---

Function implementation of friend function must be defined outside the class.

▶True

▶False

**Question No: 9 ( Marks: 1 ) <http://vustudents.ning.com>- Please choose one**

---

The normal source of `cin` object is,

▶File

▶Disk

▶Keyboard

▶RAM

**Question No: 10 ( Marks: 1 ) - Please choose one**

---

Which of the following is correct way to initialize a variable x of int type with value 10?

▶int x ; x = 10;

▶int x = 10;

▶int x, x = 10;

▶x = 10;

**Question No: 11 ( Marks: 1 ) - Please choose one**

---

Consider the following code segment. What will be the output of the following program?

```
int func(int) ;
```

```
int num = 10 ;
```

```
int main(){
```

```
int num ;
```

```
num = 5 ;
```

```
cout << num ;
```

```
cout << func(num) ;
```

```
}
```

```
int func(int x){
```

```
return num ;
```

```
}
```

▶5, 5

▶10, 5

▶5, 10

▶10, 10

**Question No: 12 ( Marks: 1 ) -<http://vustudents.ning.com> Please choose one**

---

With template function, the compiler automatically detects the passed data and generates a new copy of function using passed data.

▶True

▶False

**Question No: 13 ( Marks: 1 ) - Please choose one**

---

What will be the correct syntax to declare two-dimensional array of float data type?

▶float arr{2}{2} ;

▶float arr[2][2] ;

▶float arr[2,2] ;

▶float[2][2] arr ;

**Question No: 14 ( Marks: 1 ) - Please choose one**

---

The first parameter of operator function for << operator,

- ▶Must be passed by value
- ▶Must be passed by reference
- ▶Can be passed by value or reference
- ▶Must be object of class

**Question No: 15 ( Marks: 1 ) - Please choose one**

---

Heap is constantly changing in size.

- ▶True
- ▶False

**Question No: 16 ( Marks: 1 ) - Please choose one**

---

While calling function, the arguments are assigned to the parameters from \_\_\_\_\_.

▶left to right.

▶right to left

▶no specific order is followed

▶none of the given options.

**Question No: 17 ( Marks: 1 ) <http://vustudents.ning.com> - Please choose one**

---

Classes defined inside other classes are called \_\_\_\_\_ classes

▶looped

▶nested

▶overloaded

▶none of the given options.

**Question No: 18 ( Marks: 1 ) - Please choose one**

---

If we define an identifier with the statement **#define PI 3.1415926** then during the execution of the program the value of PI \_\_\_\_\_.

▶can not be replaced

▶None of the given options

▶Remain constant.

▶can be changed by some operation

**Question No: 19 ( Marks: 1 ) - Please choose one**

---

Which value is returned by the destructor of a class?

▶A pointer to the class.

▶An object of the class.

▶A status code determining whether the class was destructed correctly

▶Destructors do not return a value.

**Question No: 20 ( Marks: 1 ) <http://vustudents.ning.com>- Please choose one**

---

Every class contains \_\_\_\_\_.

▶Constructor

▶Destructor

▶Both a constructor and a destructor

▶None of the given options

**Question No: 21 ( Marks: 1 ) - Please choose one**

---

A template function must have

▶One or more than one arguments

▶Only one argument

▶Zero arguments

▶None of the given options

**Question No: 22 ( Marks: 1 ) - Please choose one**

---

Structured Query Language is used for \_\_\_\_\_ <http://vustudents.ning.com>

▶Databases Management

▶Networks

▶Writing Operating System

▶none of the given options

**Question No: 23 ( Marks: 1 ) - Please choose one**

---

When a call to a user-defined function finishes, the variable defined inside the function is still in existence.

▶True

▶False

**Question No: 24 ( Marks: 1 ) - Please choose one**

---

The precedence of an operator can be changed through operator overloading.

▶True

▶False

**Question No: 25 ( Marks: 1 ) - Please choose one**

---

A Matrix can be composed of ints, floats or doubles as their elements. Best way is to handle this ,  
\_\_\_\_\_ <http://vustudents.ning.com>

▶Write a separate class to handle each

▶Use templates

▶Use strings to store all types

▶None of the given options

**Question No: 26 ( Marks: 1 ) - Please choose one**

---

"**delete**" operator is used to return memory to free store, which is allocated by the "**new**" operator.

▶True

▶False

**Question No: 27 ( Marks: 2 )**

---

What is the difference between **switch** statement and **if** statement.

**Question No: 28 ( Marks: 2 )**

---

How can we initialize data members of contained object at construction time?

**Question No: 29 ( Marks: 2 )**

---

How the data members of a class are initialized with meaningful values?

**Question No: 30 ( Marks: 2 )**

---

Can we overload *new* and *delete* operators?

**Question No: 31 ( Marks: 3 )**

---

What will be the output of following functions if we call these functions three times?

1)

```
void func1(){  
int x = 0;  
x++;  
cout << x << endl;  
}
```

**2)**

```
void func2(){  
static int x = 0 ;  
x++;  
cout << x << endl ;  
}
```

**Question No: 32 ( Marks: 3 )**

---

What is the keyword '**this**' and what are the uses of '**this**' pointer?

**Question No: 33 ( Marks: 3 )**

---

Suppose an object of class A is declared as data member of class B.

(i) The constructor of which class will be called first?

(ii) The destructor of which class will be called first?

**Question No: 34 ( Marks: 5 )**

---

Write the general syntax of a class that has one function as a friend of a class along with definition of friend function.

**Question No: 35 ( Marks: 5 )**

---

Write down the disadvantages of the templates. <http://vustudents.ning.com>

**Question No: 36 ( Marks: 5 )**

---

Write a program which defines five variables which store the salaries of five employees, using setw and setfill manipulators to display all these salaries in a column.

**Note:** Display all data with in a particular width and the empty space should be filled with character x

**Output should be displayed as given below:**

xxxxxx1000

xxxxxx1500

xxxxxx20000

xxxxxx30000

xxxxxx60000

**Question No: 1** <http://vustudents.ning.com> ( Marks: 1 ) - Please choose one

---

If it is required to copy an array to another array then,

- ▶ Both arrays must be of the same size and data type
- ▶ Both arrays may be of different size
- ▶ Both arrays may be of different data type
- ▶ Both arrays may be of different size and type

**Question No: 2** ( Marks: 1 ) - Please choose one

---

Dealing with structures and functions passing by reference is the most economical method

- ▶ True
- ▶ False

**Question No: 3 ( Marks: 1 ) - Please choose one**

---

eof( ), bad( ), good( ), clear( ) all are manipulators.

▶ True

▶ False

**Question No: 4 ( Marks: 1 ) <http://vustudents.ning.com>- Please choose one**

---

Overloaded new operator function takes parameter of type *size\_t* and returns

▶ void (nothing)

▶ void pointer

▶ object pointer

▶ int pointer

**Question No: 5 ( Marks: 1 ) - Please choose one**

---

When new operator is overloaded at global level then corresponding built-in new operator will not be visible to whole of the program.

▶ True

▶ False

**Question No: 6 ( Marks: 1 ) - Please choose one**

---

If there is more than one statement in the block of a for loop, which of the following must be placed at the beginning and the ending of the loop block?

▶ parentheses ( )

▶ braces { }

▶ brackets [ ]

▶ arrows < >

**Question No: 7 ( Marks: 1 ) - Please choose one**

---

The return type of a function that do not return any value must be \_\_\_\_\_

**<http://vustudents.ning.com>**

▶ float

▶ int

▶ void

▶ double

**Question No: 8 ( Marks: 1 ) - Please choose one**

---

UNIX has been developed in \_\_\_\_\_ language.

▶ JAVA

▶ B

▶ C

▶ FORTRAN

**Question No: 9 ( Marks: 1 ) - Please choose one**

---

Like member functions, \_\_\_\_\_ can also access the private data members of a class.

▶ Non-member functions

▶ Friend functions

▶ Any function outside class

- ▶ None of the given options

**Question No: 10 ( Marks: 1 ) - Please choose one**

---

Which of the following statement is best regarding declaration of friend function?

- ▶ Friend function must be declared after public keyword.
- ▶ Friend function must be declared after private keyword.
- ▶ Friend function must be declared at the top within class definition.
- ▶ It can be declared anywhere in class as these are not affected by the public and private keywords.

**Question No: 11 ( Marks: 1 ) - Please choose one**

---

The operator function overloaded for an Assignment operator (=) must be

<http://vustudents.ning.com>

- ▶ Non-member function of class
- ▶ Member function of class
- ▶ Friend function of class
- ▶ None of the given options

**Question No: 12 ( Marks: 1 ) - Please choose one**

---

The **endl** and **flush** are \_\_\_\_\_

- ▶ Functions
- ▶ Operators

▶ Manipulators

▶ Objects

**Question No: 13 ( Marks: 1 ) - Please choose one**

---

If a symbolic constant has been defined, it will be an error to define it again.

▶ True

▶ False

**Question No: 14 ( Marks: 1 ) - Please choose one**

---

The operator used for casting, in C, is standard \_\_\_\_\_ operator.

▶ none of the given options.

▶ cast

▶ cost

▶ const

**Question No: 15 ( Marks: 1 ) - Please choose one**

---

Constructors can not be overloaded like ordinary functions.

▶ True

▶ False

**Question No: 16 ( Marks: 1 ) - Please choose one**

---

Which of the following function call is correct for the function prototype?

`defaultParameters ( int a, int b = 7, char z = '*' );`

▶ `defaultParameters (5);`

▶ defaultParameters (5, '8');

▶ defaultParameters (6, '#');

▶ defaultParameters (0, 0, '\*', 0);

**Question No: 17 ( Marks: 1 ) - Please choose one**

---

When an operator function is defined as member function for a binary Plus (+) operator then the number of argument it take is/are.

▶ Zero

▶ One

▶ Two

▶ N arguments

**Question No: 18 ( Marks: 1 ) - Please choose one**

---

We can not define a variable of user-defined data type in the class.

▶ True

▶ False

**Question No: 19 <http://vustudents.ning.com> ( Marks: 1 ) - Please choose one**

---

When an object of a class is defined inside an other class then,

▶ Constructor of enclosing class will be called first

- ▶ Constructor of inner object will be called first
  
- ▶ Constructor and Destructor will be called simultaneously
  
- ▶ None of the given options

**Question No: 20 ( Marks: 1 ) - Please choose one**

---

The appropriate data type to store the number of rows and columns of the matrix is\_\_\_\_\_.

- ▶ float
  
- ▶ int
  
- ▶ char
  
- ▶ none of the given options.

**Question No: 21 ( Marks: 1 ) - Please choose one**

---

Class is a user defined\_\_\_\_\_.

- ▶ data type
- ▶ memory referee
- ▶ value
- ▶ none of the given options.

<http://vustudents.ning.com>

**Question No: 22 ( Marks: 1 ) - Please choose one**

---

A pointer variable can be,

- ▶ Decrementd
- ▶ Incremented
- ▶ Multiplied
- ▶ Both Decrementd and Decrementd

**Question No: 23 ( Marks: 1 ) - Please choose one**

---

NULL value has been defined in \_\_\_\_\_ and \_\_\_\_\_ header files.

▶ strings.h and iostream.h

▶ ctype.h and conio.c

▶ conio.c and conio.h

▶ stdlib.h and stddef.h

**Question No: 24 ( Marks: 1 ) <http://vustudents.ning.com>- Please choose one**

---

A Matrix can be composed of ints, floats or doubles as their elements. Best way is to handle this ,

---

- ▶ Write a separate class to handle each
  
- ▶ Use templates
  
- ▶ Use strings to store all types
  
- ▶ None of the given options

**Question No: 25 ( Marks: 1 ) - Please choose one**

---

"setprecision" manipulator will set

- ▶ The number of digits after the decimal point
  
- ▶ The number of digits before the decimal point
  
- ▶ The number of digits in a number
  
- ▶ None of the given options

**Question No: 26 ( Marks: 1 ) - Please choose one**

---

Which of the following option will be true, if we overload "-=" operator?

- ▶ only - operator needs to be overloaded
- ▶ Minus (-) and = operators need to be overloaded
- ▶ the -= operator need to be overloaded explicitly
- ▶ the - and = operators need to be overloaded implicitly

**Question No: 27 ( Marks: 2 )**

---

Suppose there is a template function '**func**' having argument of type U and return type T. What will be the C++ syntax to call this function, passing a variable '**x**' of type double and returning an int type?

**Question No: 28 (Marks: 2)**

---

Which variable will be used in inner code block if we have the same names of variable at outer code block and inner code block?

**Question No: 29 (Marks: 2)**

---

What is the benefit of reference and where can we use it?

**Question No: 30 (Marks: 2)**

---

Write the C++ code for the declaration of overloaded stream insertion and stream extraction operator for the object **d** of type **Date**.

**Question No: 31 (Marks: 3)**

---

What will be the output of following functions if we call these functions three times?

1)

```
void func1(){  
int x = 0;  
x++;  
cout << x << endl;  
}
```

2)

```
void func2(){  
static int x = 0 ;  
x++;  
cout << x << endl ;  
}
```

**Question No: 32 ( Marks: 3 )**

---

If the requested memory is not available in the system then what does **calloc/malloc** and **new** operator return?

**Question No: 33 ( Marks: 3 )**

---

Suppose an object of class A is declared as data member of class B.

- (i) The constructor of which class will be called first?
- (ii) The destructor of which class will be called first?

**Question No: 34 ( Marks: 5 )**

---

What is difference between Unary and binary operators and how they can be overloaded?

**Question No: 35 ( Marks: 5 )**

---

Suppose we have the following class.

```
class Matrix  
  
{  
  
private:  
  
int Elements[3][3];  
  
};
```

Write the operator function of stream extraction operator (>>) for this class.

<http://vustudents.ning.com>

**Question No: 36 ( Marks: 5 )**

---

What is meant by user interface and class interface in C++ ? And what role a class interface can play in user interface [Marks 5]

**FINALTERM EXAMINATION**

---

Which of the following option will be true, if we overload "-" operator?

- ▶ only - operator needs to be overloaded
  
- ▶ Minus (-) and = operators need to be overloaded
  
- ▶ the -= operator need to be overloaded explicitly
  
- ▶ the - and = operators need to be overloaded implicitly

**Question No: 27 ( Marks: 2 )**

---

Suppose there is a template function '**func**' having argument of type U and return type T. What will be the C++ syntax to call this function, passing a variable '**x**' of type double and returning an int type?

**Question No: 28 ( Marks: 2 )**

---

Which variable will be used in inner code block if we have the same names of variable at outer code block and inner code block?

**Question No: 29 ( Marks: 2 )**

---

What is the benefit of reference and where can we use it?

**Question No: 30 ( Marks: 2 )**

---

Write the C++ code for the declaration of overloaded stream insertion and stream extraction operator for the object **d** of type **Date**.

**Question No: 31 ( Marks: 3 )**

---

What will be the output of following functions if we call these functions three times?

**1)**

```
void func1(){
```

```
int x = 0;
```

```
x++;
```

```
cout << x << endl;
```

```
}
```

2)

```
void func2(){
```

```
static int x = 0 ;
```

```
x++;
```

```
cout << x << endl ;
```

```
}
```

**Question No: 32 ( Marks: 3 )**

---

If the requested memory is not available in the system then what does **calloc/malloc** and **new** operator return?

**Question No: 33 ( Marks: 3 )**

---

Suppose an object of class A is declared as data member of class B.

(i) The constructor of which class will be called first?

(ii) The destructor of which class will be called first?

**Question No: 34 ( Marks: 5 )**

---

What is difference between Unary and binary operators and how they can be overloaded?

**Question No: 35 ( Marks: 5 )**

---

Suppose we have the following class.

```
class Matrix  
{  
private:  
int Elements[3][3];  
};
```

Write the operator function of stream extraction operator (>>) for this class.

**<http://vustudents.ning.com>**

**Question No: 36 ( Marks: 5 )**

---

What is meant by user interface and class interface in C++ ? And what role a class interface can play in user interface [Marks 5]

**Question No: 1 ( Marks: 1 ) - Please choose one**

---

In if structure the block of statements is executed only,

▶When the condition is false

▶When it contain arithmetic operators

▶When it contain logical operators

▶When the condition is true

**Question No: 2 ( Marks: 1 ) - Please choose one**

---

Header file: **fstream.h** includes the definition of the stream classes \_\_\_\_\_.

▶ifstream, fstream, cout

▶ifstream, fstream, ofstream

▶fstream, cin, cout

▶None of the above

**Question No: 3 ( Marks: 1 ) - Please choose one**

---

To access the data members of structure \_\_\_\_\_ is used.

▶dot operator (.)

▶\* operator

▶[] operator

▶None of given.

**Question No: 4 ( Marks: 1 ) - Please choose one**

---

eof( ), bad( ), good( ), clear( ) all are manipulators.

▶True

▶False

**Question No: 5 ( Marks: 1 ) - Please choose one**

---

Which kind of functions can access private member variables of a class?

▶Friend functions of the class

▶Private member functions of the class

▶Public member functions of the class

▶Friend, private and public functions

**Question No: 6 ( Marks: 1 ) - Please choose one**

---

The return type of operator function must always be void.

▶True

▶False

**Question No: 7 ( Marks: 1 ) - Please choose one**

---

Friend function of a class is \_\_\_\_\_ .

▶Member function

▶Non-member function

▶Private function

▶Public function

**Question No: 8 ( Marks: 1 ) - Please choose one**

---

Function implementation of friend function must be defined outside the class.

▶True

▶False

**Question No: 9 ( Marks: 1 ) - Please choose one**

---

The normal source of **cin** object is,

▶File

▶Disk

▶Keyboard

▶RAM

**Question No: 10 ( Marks: 1 ) - Please choose one**

---

Which of the following is correct way to initialize a variable x of int type with value 10?

▶int x ; x = 10;

▶int x = 10;

▶int x, x = 10;

▶x = 10;

**Question No: 11 ( Marks: 1 ) - Please choose one**

---

Consider the following code segment. What will be the output of the following program?

```
int func(int) ;
```

```
int num = 10 ;
```

```
int main(){
```

```
int num ;
```

```
num = 5 ;
```

```
cout << num ;
```

```
cout << func(num) ;
```

```
}
```

```
int func(int x){
```

```
return num ;
```

```
}
```

▶5, 5

▶10, 5

▶5, 10

▶10, 10

**Question No: 12 ( Marks: 1 ) - Please choose one**

---

With template function, the compiler automatically detects the passed data and generates a new copy of function using passed data.

▶True

▶False

**Question No: 13 ( Marks: 1 ) - Please choose one**

---

What will be the correct syntax to declare two-dimensional array of float data type?

▶ `float arr{2}{2};`

▶ `float arr[2][2];`

▶ `float arr[2,2];`

▶ `float[2][2] arr;`

**Question No: 14 ( Marks: 1 ) - Please choose one**

---

The first parameter of operator function for << operator,

- ▶Must be passed by value
- ▶Must be passed by reference
- ▶Can be passed by value or reference
- ▶Must be object of class

**Question No: 15 ( Marks: 1 ) - Please choose one**

---

Heap is constantly changing in size.

- ▶True
- ▶False

**Question No: 16 ( Marks: 1 ) - Please choose one**

---

While calling function, the arguments are assigned to the parameters from \_\_\_\_\_.

▶left to right.

▶right to left

▶no specific order is followed

▶none of the given options.

**Question No: 17 ( Marks: 1 ) - Please choose one**

---

Classes defined inside other classes are called \_\_\_\_\_ classes

▶looped

▶nested

▶overloaded

▶none of the given options.

**Question No: 18 ( Marks: 1 ) - Please choose one**

---

If we define an identifier with the statement **#define PI 3.1415926** then during the execution of the program the value of PI \_\_\_\_\_.

▶can not be replaced

▶None of the given options

▶Remain constant.

▶can be changed by some operation

**Question No: 19 ( Marks: 1 ) - Please choose one**

---

Which value is returned by the destructor of a class?

▶A pointer to the class.

▶An object of the class.

▶A status code determining whether the class was destructed correctly

▶Destructors do not return a value.

**Question No: 20 ( Marks: 1 ) - Please choose one**

---

Every class contains \_\_\_\_\_.

▶Constructor

▶Destructor

▶Both a constructor and a destructor

▶None of the given options

**Question No: 21 ( Marks: 1 ) - Please choose one**

---

A template function must have

▶One or more than one arguments

▶Only one argument

▶Zero arguments

▶None of the given options

**Question No: 22 ( Marks: 1 ) - Please choose one**

---

Structured Query Language is used for \_\_\_\_\_

▶Databases Management

▶Networks

▶Writing Operating System

▶none of the given options

**Question No: 23 ( Marks: 1 ) - Please choose one**

---

When a call to a user-defined function finishes, the variable defined inside the function is still in existence.

▶True

▶False

**Question No: 24 ( Marks: 1 ) - Please choose one**

---

The precedence of an operator can be changed through operator overloading.

▶True

▶False

**Question No: 25 ( Marks: 1 ) - Please choose one**

---

A Matrix can be composed of ints, floats or doubles as their elements. Best way is to handle this ,

---

▶Write a separate class to handle each

▶Use templates

▶Use strings to store all types

▶None of the given options

**Question No: 26 ( Marks: 1 ) - Please choose one**

---

"**delete**" operator is used to return memory to free store, which is allocated by the "**new**" operator.

▶True

▶False

**Question No: 27 ( Marks: 2 )**

---

What is the difference between **switch** statement and **if** statement.

**Question No: 28 ( Marks: 2 )**

---

How can we initialize data members of contained object at construction time?

**Question No: 29 ( Marks: 2 )**

---

How the data members of a class are initialized with meaningful values?

**Question No: 30 ( Marks: 2 )**

---

Can we overload *new* and *delete* operators?

**Question No: 31 ( Marks: 3 )**

---

What will be the output of following functions if we call these functions three times?

1)

```
void func1(){  
int x = 0;  
x++;  
cout << x << endl;  
}
```

**2)**

```
void func2(){  
static int x = 0 ;  
x++;  
cout << x << endl ;  
}
```

**Question No: 32 ( Marks: 3 )**

---

What is the keyword '**this**' and what are the uses of '**this**' pointer?

**Question No: 33 ( Marks: 3 )**

---

Suppose an object of class A is declared as data member of class B.

(i) The constructor of which class will be called first?

(ii) The destructor of which class will be called first?

**Question No: 34 ( Marks: 5 )**

---

Write the general syntax of a class that has one function as a friend of a class along with definition of friend function.

**Question No: 35 ( Marks: 5 )**

---

Write down the disadvantages of the templates.

**Question No: 36 ( Marks: 5 )**

---

Write a program which defines five variables which store the salaries of five employees, using setw and setfill manipulators to display all these salaries in a column.

**Note:** Display all data with in a particular width and the empty space should be filled with character x

**Output should be displayed as given below:**

xxxxxx1000

xxxxxx1500

xxxxxx20000

xxxxxx30000

xxxxxx60000

**Question No: 1 ( Marks: 1 ) - Please choose one**

---

\*.doc is \_\_\_\_\_ by type.

.

▶Sequential File

▶Random Access File

▶Data File

▶Record File

**Question No: 2 ( Marks: 1 ) - Please choose one**

---

Which of the following is NOT a preprocessor directive?

▶#error

▶#define

▶#line

▶#undef

**Question No: 3 ( Marks: 1 ) - Please choose one**

---

The return type of operator function must always be void.

▶True

▶False

**Question No: 4 ( Marks: 1 ) - Please choose one**

---

What does (**\*this**) represents?

▶The current function of the class

▶The current pointer of the class

▶The current object of the class

▶A value of the data member

**Question No: 5 ( Marks: 1 ) - Please choose one**

---

The statement `cin.get ();` is used to,

▶Read a string from keyboard

▶Read a character from keyboard

▶Read a string from file

▶Read a character from file

**Question No: 6 ( Marks: 1 ) - Please choose one**

---

When we do dynamic memory allocation in the constructor of a class, then it is necessary to provide a destructor. <http://vustudents.ning.com>

▶ True

▶ False

**Question No: 7 ( Marks: 1 ) - Please choose one**

---

Overloaded new operator function takes parameter of type *size\_t* and returns

▶ void (nothing)

▶ void pointer

▶ object pointer

▶ int pointer

**Question No: 8 ( Marks: 1 ) - Please choose one**

---

The second parameter of operator functions for << and >> are objects of the class for which we are overloading these operators.

▶ True

▶ False

**Question No: 9 <http://vustudents.ning.com> ( Marks: 1 ) - Please choose one**

---

\_\_\_\_\_ C++  
is a case-sensitive language

▶ True

▶ False

**Question No: 10 ( Marks: 1 ) - Please choose one**

---

\_\_\_\_\_ To  
include code from the library in the program, such as iostream, a directive would be called up using this  
command.

▶#include "iostream.h"

▶include <iostream.h>

▶include <iostream.h>

▶#include <iostream.h>

**Question No: 11 ( Marks: 1 ) - Please choose one**

---

template function must have only generic data types. A

▶True

▶False

**Question No: 12 ( Marks: 1 ) - Please choose one**

---

Template class can not have static variables.

▶True

▶False

Question No: 13 <http://vustudents.ning.com> ( Marks: 1 ) - Please choose one

---

What will be the correct syntax to assign an array named *arr* of 5 elements to a pointer *ptr*?

▶ `*ptr = arr ;`

▶ `ptr = arr ;`

▶ `*ptr = arr[5] ;`

▶ `ptr = arr[5] ;`

Question No: 14 ( Marks: 1 ) - Please choose one

---

What will be the correct syntax to access the value of fourth element of an array using pointer *ptr*?

▶ptr[3]

▶(ptr+3)

▶\*(ptr+3)

▶Both 1and 3

**Question No: 15 ( Marks: 1 ) - Please choose one**

\_\_\_\_\_ If  
most significant bit of un-signed number is 1 then it represents a positive number.

▶True

▶False

**Question No: 16 <http://vustudents.ning.com> ( Marks: 1 ) - Please choose one**

\_\_\_\_\_ If  
there is a symbol (& sign) used with the variable name followed by data type then it refers to \_\_\_\_\_ and  
if & is being used with variable name then it refers to \_\_\_\_\_.

▶Address of variable, reference variable

▶Reference variable, value of variable

▶Reference variable, address of variable

▶Address of variable, value of variable

**Question No: 17 ( Marks: 1 ) - Please choose one**

\_\_\_\_\_ We  
can also do conditional compilation with preprocessor directives.

▶True

▶False

**Question No: 18 ( Marks: 1 ) - Please choose one**

\_\_\_\_\_ The  
default value of a parameter can be provided inside the \_\_\_\_\_

▶function prototype

▶function definition

▶both function prototype or function definition

▶none of the given options.

**Question No: 19 ( Marks: 1 ) - Please choose one**

---

Classes defined inside other classes are called \_\_\_\_\_ classes

▶looped

▶nested

▶overloaded

▶none of the given options.

**Question No: 20 ( Marks: 1 ) - Please choose one**

---

What purpose do classes serve?

- ▶Data encapsulation
- ▶Providing a convenient way of modeling real-world objects
- ▶Simplifying code reuse
- ▶All of the given options

**Question No: 21 ( Marks: 1 ) - Please choose one**

---

Every class contains \_\_\_\_\_.

- ▶Constructor

▶Destructor

▶Both a constructor and a destructor

▶None of the given options

**Question No: 22 <http://vustudents.ning.com> ( Marks: 1 ) - Please choose one**

---

operator is used to allocate memory from the free store during **new**

▶Compile Time

▶Run Time

▶Link Time

▶None of the given options

**Question No: 23 ( Marks: 1 ) - Please choose one**

---

When an object of a class is defined inside another class then,

▶Destructor of enclosing class will be called first

▶Destructor of inner object will be called first

▶Constructor and Destructor will be called simultaneously

▶None of the given options

**Question No: 24 ( Marks: 1 ) - Please choose one**

---

It is possible to define a class within another class.

▶True

▶False

**Question No: 25 ( Marks: 1 ) - Please choose one**

\_\_\_\_\_ New  
and Delete are also used with \_\_\_\_\_ and data types as well.

▶Class, Objects

▶Structures, Pointers

▶Both Class and structures

▶None of above

**Question No: 26 ( Marks: 1 ) - Please choose one**

\_\_\_\_\_ With New keyword, data types and class members are initialized with meaningful values instead of garbage. <http://vustudents.ning.com>

▶True

►False

**Question No: 27 ( Marks: 2 )**

---

How many arguments a Unary Operator take? Can we make a binary operator as unary operator?

Ans: Unary operator takes only one argument like  $i++$  or  $i--$  (Post increment or post decrement operators for integers) or  $++i,--i$  (Pre increment or pre decrement operators for integers) ,we can not make Unary operator as binary or binary as Unary operator.

**Question No: 28 ( Marks: 2 )**

---

Which arithmetic operators cannot have a floating point operand?

Ans: <http://vustudents.ning.com>

Modulus operator

This operator can only be used with integer operands ONLY

**Question No: 29 ( Marks: 2 )**

---

What are manipulators? Give one example.

**Ans:**

The manipulators are like something that can be inserted into stream, effecting a change in the behavior. For example, if we have a floating point number, say pi ( $\pi$ ), and have written it as `float pi = 3.1415926` ; Now there is need of printing the value of pi up to two decimal places i.e. 3.14 . This is a formatting functionality. For this, we have a *manipulator* that tells about width and number of decimal points of a number being printed.

Some manipulators are parameter less. We simply use the name of the manipulator that works. For example, we have been using `endl`, which is actually a manipulator, not data. When we write `cout << endl` ; a new line is output besides flushing the buffer. Actually, it manipulates the output stream.

**Question No: 30 ( Marks: 2 )**

---

Write down piece of code that will declare a matrix of 3x3. And initialize all its locations with 0;

**Ans:**

```
int matrix [3] [3] ;
```

```
matrix [0] [0] = 0;
```

```
matrix [0] [1] = 0;
```

matrix [0] [2] = 0;

matrix [1] [0] = 0;

matrix [1] [2] = 0;

matrix [1] [2] = 0;

matrix [2] [0] = 0;

matrix [2] [1] = 0;

matrix [2] [2] = 0;

we can also do it as given below

```
int matrix [3][3] = { 0 }; //all elements 0
```

**Question No: 31 ( Marks: 3 )**

---

Which one (copy constructor or assignment operator) will be called in each of the following code segment?

1) Matrix m1 (m2);

2) Matrix m1, m2;

m1 = m2;

3) Matrix m1 = m2;

**Ans:**

1) Matrix m1 (m2); **copy constructor**

2) Matrix m1, m2;

m1 = m2; **assignment operator**

3) Matrix m1 = m2; **assignment operator**

**Question No: 32 ( Marks: 3 )**

---

What will be the output of following function if we call this function by passing int 5?

```
template <class T>
T reciprocal(T x)
{
return (1/x);
}
```

**Ans:**

**1/5**

**Question No: 33 ( Marks: 3 )**

---

**Identify the errors in the following member operator function and also correct them.**

**<http://vustudents.ning.com>**

```
math * operator(math m);
```

```
math * operator (math m)
```

```
{
```

```
    math temp;
```

```
    temp.number= number * number;
```

```
    return number;
```

```
}
```

ANS:

The errors are in the arguments of the member operation function and also in the body of operator member function.

Correct function should be

```
math *operator(math *m);
```

```
math *operator (math *m)
```

```
{
```

```
    math temp;
```

```
    temp = m;
```

```
    temp.number= number * number;
```

```
    return temp.number;
```

```
}
```

**Question No: 34 ( Marks: 5 )**

---

Write a program which defines three variables of type double which store three different values including decimal points, using setprecision manipulators to print all these values with different number of digits after the decimal number.

Ans:

```
#include <iostream>
```

```
#include <iomanip>
```

```
int main ()
```

```
{
```

```
    double x1 = 12345624.72345
```

```
    double x2 = 987654.12345
```

```
    double x3 = 1985.23456
```

```
    cout << setprecision (3) << x1<< endl;
```

```
    cout << setprecision (4) << x2 << endl;
```

```
    cout << setprecision (5) << x3<< endl;
```

```
    return 0;
```

```
}
```

**Question No: 35 ( Marks: 5 )**

---

What are the advantages and disadvantages of using templates?

Ans:

Many things can be possible without using templates but they do offer several clear advantages not offered by any other techniques:

**Advantages:**

- Templates are easier to write than writing several versions of your similar code for different types. You create only one generic version of your class or function instead of manually creating specializations.
- Templates are type-safe. This is because the types that templates act upon are known at compile time, so the compiler can perform type checking before errors occur.
- Templates can be easier to understand, since they can provide a straightforward way of abstracting type information.
- They help in utilizing compiler optimizations to the extreme. Then of course there is room for misuse of the templates. On one hand they provide an excellent mechanism to create specific type-safe classes from a generic definition with little overhead.

**Disadvantages:** <http://vustudents.ning.com>

On the other hand, if misused

- Templates can make code difficult to read and follow depending upon coding style.
- They can present seriously confusing syntactical problems esp. when the code is large and spread over several header and source files.
- Then, there are times, when templates can "excellently" produce nearly meaningless compiler errors thus requiring extra care to enforce syntactical and other design constraints. A common mistake is the angle bracket problem.

**Question No: 36 ( Marks: 5 )**

---

Suppose a program has a math class having only one data member **number**.

Write the declaration and definition of operator function to overload + operator for the statements of main function.

```
math obj1, obj2;
```

obj2= 10 + obj1 ;

**Ans:**

```
#include <iostream.h>
```

```
math
```

```
{
```

```
  mth operator + (obj1,obj2)
```

```
  mth operator + (obj1,obj2)
```

```
{
```

```
  mth operator + (obj1,obj2)
```

```
  mth operator + (obj1,obj2)
```

```
}
```

```
}
```

.....

**FINALTERM EXAMINATION**

Spring 2010

CS201- Introduction to Programming

Ref No: 1557656

Time: 90 min

Marks: 58

**Student Info**

Student ID:	Dc100200028
Center:	OPKST
Exam Date:	12/8/10

**Question No: 1 ( Marks: 1 ) - Please choose one**

---

Pointer is a variable which store,

▶ Data

▶ Memory Address

▶ Data Type

▶ Values

**Question No: 2 ( Marks: 1 ) - Please choose one**

---

All preprocessor directives are started with the symbol\_\_\_\_\_.

▶ \*

▶ +

+

▶ @

▶ #

**Question No: 3** <http://vustudents.ning.com> ( Marks: 1 ) - Please choose one

---

Within the statement **obj1=obj2**; *obj1* will call the assignment operator function and *obj2* will be passed as an argument to function.

▶ True

▶ False

**Question No: 4** ( Marks: 1 ) - Please choose one

---

What is the sequence of event(s) when deallocating memory using delete operator?

▶ Only block of memory is deallocated for objects

▶ Only destructor is called for objects

▶ Memory is deallocated first before calling destructor

▶ Destructor is called first before deallocating memory

**Question No: 5 ( Marks: 1 ) - Please choose one**

---

The second parameter of operator functions for << and >> are objects of the class for which we are overloading these operators. <http://vustudents.ning.com>

▶ True

▶ False

**Question No: 6 ( Marks: 1 ) - Please choose one**

---

To include code from the library in the program, such as iostream, a directive would be called up using this command.

▶ #include "iostream.h"

▶ include <iostream.h>

▶ include <iostream.h>

▶ #include <iostream.h>

**Question No: 7** <http://vustudents.ning.com> ( Marks: 1 ) - Please choose one

---

The number 544.53 must be stored in \_\_\_\_\_ data type.

▶ int

▶ short

▶ float

▶ char

**Question No: 8 ( Marks: 1 ) - Please choose one**

---

A template function can have different type of arguments.

▶ True

▶ False

**Question No: 9 ( Marks: 1 ) - Please choose one**

---

**For which values of the integer `_value` will the following code becomes an infinite loop?**

```
int number=1;
while (true) {
    cout << number;
    if (number == 3) break;
    number += integer_value; }
```

▶ any number other than 1 or 2

▶ only 0

▶ only 1

▶ only 2

**Question No: 10 ( Marks: 1 ) - Please choose one**

---

Template class cannot have static variables. <http://vustudents.ning.com>

▶ True

▶ False

**Question No: 11 ( Marks: 1 ) - Please choose one**

---

Which of the following is used with bit manipulation?

▶ Signed integer

▶ Un-signed integer

▶ Signed double

▶ Un-signed double

**Question No: 12 ( Marks: 1 ) - Please choose one**

---

Structure is a collection of \_\_\_\_\_ under a single name.

▶ Only Functions

▶ Only Variables

▶ Both Functions and Variables

▶ None of the given options

**Question No: 13 ( Marks: 1 ) - Please choose one**

---

Which of the following is the correct C++ syntax to allocate space dynamically for an array of 10 int?

▶ `new int(10) ;`

▶ `new int[10] ;`

▶ `int new(10) ;`

▶ `int new[10];`

**Question No: 14 ( Marks: 1 ) - Please choose one**

---

Unary operator implemented as member function takes \_\_\_\_ arguments whereas non-member function takes \_\_\_\_ arguments.

▶ One, zero

▶ Zero, one

▶ One, two

▶ Two, one

**Question No: 15 ( Marks: 1 ) - Please choose one**

---

The first parameter of overloaded stream insertion operator is \_\_\_\_\_ where second parameter is \_\_\_\_\_ <http://vustudents.ning.com>

- ▶ input stream, object of class
- ▶ object of class, output stream
- ▶ output stream, object of class
- ▶ object of class, input stream

**Question No: 16 ( Marks: 1 ) - Please choose one**

---

We can also do conditional compilation with preprocessor directives.

- ▶ True
- ▶ False

**Question No: 17 ( Marks: 1 ) - Please choose one**

---

If a symbolic constant has been defined, it will be an error to define it again.

▶ True

▶ False

**Question No: 18 ( Marks: 1 ) - Please choose one**

---

While calling function, the arguments are assigned to the parameters from \_\_\_\_\_.

▶ left to right.

▶ right to left

▶ no specific order is followed

▶ none of the given options.

**Question No: 19 ( Marks: 1 ) - Please choose one**

---

Classes defined inside other classes are called \_\_\_\_\_ classes

▶ looped

▶ nested

▶ overloaded

▶ none of the given options.

**Question No: 20 ( Marks: 1 ) - Please choose one**

---

If we define an identifier with the statement **#define PI 3.1415926** then during the execution of the program the value of PI \_\_\_\_\_.

▶ cannot be replaced

▶ None of the given options

▶ Remain constant.

- ▶ can be changed by some operation

**Question No: 21 ( Marks: 1 ) - Please choose one**

---

Assignment operator is -----associative. <http://vustudents.ning.com>

- ▶ right

- ▶ left

- ▶ binary

- ▶ unary

**Question No: 22 ( Marks: 1 ) - Please choose one**

---

If **text** is a pointer of class **String** then what is meant by the following statement?

**text = new String [5];**

- ▶ Creates an array of 5 string objects statically
  
- ▶ Creates an array of 5 string objects dynamically
  
- ▶ Creates an array of pointers to string
  
- ▶ Creates a string Object

**Question No: 23 ( Marks: 1 ) - Please choose one**

---

The return type of the operator function for << operator is \_\_\_\_\_.

- ▶ class for which we overload operator
- ▶ reference of ostream class (ostream&)
- ▶ reference of istream class (istream&)
- ▶ void

**Question No: 24 ( Marks: 1 ) - Please choose one**

---

The code is written to \_\_\_\_\_ the program.

- ▶ implement
- ▶ design
- ▶ analysis
- ▶ none of the given options.

**Question No: 25 ( Marks: 1 ) - Please choose one**

---

Memory allocated at run time is a system resource and it is the responsibility of \_\_\_\_\_ to de-allocate the memory. <http://vustudents.ning.com>

- ▶ System
- ▶ Programmer
- ▶ User of program
- ▶ None of given options

**Question No: 26 ( Marks: 1 ) - Please choose one**

---

Templates are not type safe.

▶ true

▶ false

**Question No: 27 ( Marks: 2 )**

---

Give the general syntax of class template.

**Answer:**

**Syntax of class template:**

```
template <class T>
class class-name()
{
definition of class
};
```

**Question No: 28 ( Marks: 2 )**

---

What is difference between endl and \n?

Answer:

The difference between endl and \n *is that* endl is use to start a new line for the next row

And \n is a new line character.

**Question No: 29 ( Marks: 2 )**

---

What is the **this** pointer? Give an example of its use.

**Answer:**

**This** pointer is use to points to the current object in programming.

**Question No: 30 ( Marks: 2 )**

---

**Identify each of the following as function call, function definition and function declaration.**

1. int func(int num1, int num2);

Function call:

Function ; Function definition: Integer; Function declaration: Num1

and Num2

2. `int func(int, int);`  
Function call:

Function ; Function definition: Integer; Function declaration: integers

3. `func(5, 6);`

Function call:

Function ; Function definition: numbers; Function declaration: 5&6

4. `int func(int num1, int num2){}`  
Function call:

Function ; Function definition: Integer; Function declaration: Num1 and Num2 from  
user

**Question No: 31 (Marks: 3)**

---

Consider the following code segment. What will be the output of the following code segment?

```
class class1{  
public:  
    class class2{  
        public:  
            class2(){
```

```
    cout << "Calling default constructor of class2\n" ;
}
};

class1(){
    cout << "Calling default constructor of class1\n" ;
}

};

main(){
class1::class2 obj1;
class1 obj2 ;
}
```

**Question No: 32 ( Marks: 3 )**

---

Is it possible to define two functions as given below? Justify your answer.

```
func(int x, int y)
```

```
func(int &x, int &y)
```

**Answer:**

No, we cannot define two functions as `func(intx, inty)` `func(int &x, int&y)` because it's give an error function not initializing.

**Question No: 33 ( Marks: 3 )**

---

What happens when we use new and delete operator?

**Answer:**

When we use **new** operator to create objects the memory space is allocated for the object and then its constructor is called. Similarly, when we use **delete** operator with our objects, the destructor is called for the object before deallocating the storage to the object.

**Question No: 34 ( Marks: 5 )**

---

What is the difference between function overloading and operator overloading?

**Answer:**

Difference b/w function overloading and operator overloading is:

In function overloading, the functions have the same name but differ either by the number of arguments or the type of the arguments.

Operator overloading is to allow the same operator to be bound to more than one implementation, depending on the types of the operands.

**Question No: 35 ( Marks: 5 )**

---

Why the first parameter of operator function for << operator must be passed by reference?

**Answer:**

Operator<<'s first parameter must be an ostream passed by reference. Its second parameter, the IntList that is printed, does not have to be passed as a const-reference parameter; however it is more efficient to pass it by reference than by value (since that avoids a call to the copy constructor), and it should not be modified by operator<<, so it should be a const reference parameter

**Question No: 36 ( Marks: 5 )**

---

Read the given below code and explain what task is being performed by this function

```
Matrix :: Matrix ( int row , int col )  
{  
    numRows = row ;  
    numCols = col ;  
    elements = new ( double * ) [ numRows ] ;  
    for ( int i = 0 ; i < numRows ; i ++ )
```

```
{
elements [ i ] = new double [ numCols ] ;
for ( int j = 0 ; j < numCols ; j ++ )
    elements [ i ] [ j ] = 0.0 ;
}
}
```

Hint : This function belong to a matrix class, having

Number of Rows = numRows

Number of Columns = numCols

**Answer:**

In this code the matrix function is defined, it get the number of rows from the user and create the row of matrix and then get the columns from the user and create the columns. The New is showing for creating more array space for the data which user enters. The elements [i][j] will print the data in matrix form. <http://vustudents.ning.com>
